ACKNOWLEDGMENTS

Many persons participated in the various activities of the 1987 Census of Manufactures.

The overall planning and review of the census operations were performed by the staff of the Office of the Assistant Director for Economic and Agriculture Censuses.

This report was prepared in the Industry Division. **John Govoni**, Assistant Chief for Census/ASM Programs, was responsible for the overall planning, management, and coordination of the census of manufactures. Planning and implementation were under the direction of **Kenneth I. Hansen**, Chief, Census/ASM Durable Branch, assisted by **Charles T. Lee, Jr.**, Section Chief, with primary data analysis responsibilities performed by **Mary Jane Gwynn**.

Systems and procedures for mailout, receipt, correspondence, data input, industry classification, other clerical processing, administrative record processing, and quality control, along with the associated electronic computer programs, were developed in the Economic Surveys Division, **W. Joel Richardson**, Chief.

Mailout preparation and receipt operations, clerical and analytical review activities, data keying, and geocoding review were performed by the staff of the Data Preparation Division, **Joseph S. Harris**, Chief.

Geographic coding procedures and associated computer programs were developed by the staff of the Geography Division, **Robert W. Marx**, Chief.

The computer processing systems were developed and coordinated in the Economic Programming Division, **Barry M. Cohen**, Chief. **Hyman Chansky**, Assistant Division Chief for Industry Programs, was responsible for implementation of the computer systems. The computer programs were prepared under the supervision of **George D. Anderson**, Chief, Minerals and Manufactures Branch, assisted by **Barbara Lambert**, **Gerald Turnage**, and **Gary Sheridan**.

Computer processing was performed in the Computer Services Division, **Marvin D. Raines**, Chief.

The planning, design, review, and composition of report forms were performed in the Administrative Services Division, **Michael G. Garland**, Chief.

The staff of Publications Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement. **Cynthia G. Brooks** provided publication coordination and editing.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

If you have any questions concerning the statistics in this report, call (301) 763-7304.

INTRODUCTION

PURPOSE AND USES OF THE ECONOMIC CENSUSES

The economic censuses are the major source of facts about the structure and functioning of the Nation's economy. They provide essential information for government, business, industry, and the general public.

Economic censuses furnish an important part of the framework for such composite measures as the gross national product, input-output measures, production and price indexes, and other statistical series that measure short-term changes in economic conditions.

Policy-making agencies of the Federal Government use the data, especially in monitoring economic activity and providing assistance to business.

State and local governments use the data to assess business activities and tax bases within their jurisdictions and to develop programs to attract business.

Trade associations study trends in their own and competing industries, and keep their members informed of market changes.

Individual businesses use the data to locate potential markets and to analyze their own production and sales performance relative to industry or area averages.

AUTHORITY AND SCOPE

Title 13 of the United States Code (sections 131, 191, and 224) directs the Census Bureau to take the economic censuses every 5 years, covering years ending in 2 and 7. The 1987 Economic Censuses consist of the

- Census of Retail Trade
- Census of Wholesale Trade
- Census of Service Industries
- Census of Transportation
- Census of Manufactures
- Census of Mineral Industries
- Census of Construction Industries

Special programs also cover enterprise statistics and minority-owned and women-owned businesses. (The 1987 Census of Agriculture and 1987 Census of Governments are conducted separately.) The next economic censuses are scheduled to be taken in 1993 covering the year 1992.

AVAILABILITY OF THE DATA

The results of each of the economic censuses are available in printed reports, for sale by the U.S. Government Printing Office, and on microfiche, computer tape, compact discs with read-only memory, and flexible diskettes, for sale by the Census Bureau. Order forms for all types of products are available on request from Customer Services, Census Bureau, Washington, DC 20233. A more complete description of publications being issued from this census is on the inside back cover of this document.

Census facts are also widely disseminated by trade associations, business journals, and newspapers. Volumes containing census statistics are available in most major public and college libraries. Finally, State Data Centers in every State and Business and Industry Data Centers in many States also supply economic census statistics.

WHAT'S NEW IN 1987

Several changes have taken place for the 1987 censuses. Data will be reported on the basis of the newly revised Standard Industrial Classification (SIC) system with selected reports including "bridge tables," linking the old and new classification systems. A new set of metropolitan areas has been adopted, and more detailed information will be available for businesses with no paid employees. For additional information on these changes, review the subsequent text.

HISTORICAL INFORMATION

The economic censuses have been taken together as an integrated program at 5-year intervals since 1967, and before that for 1963, 1958, and 1954. Prior to that time, the individual censuses were taken separately at varying intervals.

The economic censuses trace their beginnings to the 1810 Decennial Census, when questions on manufacturing were included with those for population. Coverage of economic activities was expanded for 1840 and subsequent censuses to include mining and some commercial

activities. In 1902, Congress established a permanent Census Bureau and directed that a census of manufactures be taken every 5 years. The 1905 manufactures census was the first time a census was taken apart from the regular every-10-year population census.

The first census of business was taken in 1930, covering 1929. Initially it covered retail and wholesale trade, and construction industries, but it was broadened in 1933 to include some of the service trades.

The 1954 economic censuses were the first to be fully integrated—providing comparable census data across economic sectors, using consistent time periods, concepts, definitions, classifications, and reporting units. These were the first censuses to be taken by mail, using lists of firms provided by the administrative records of other federal agencies. Since 1963, administrative records have also been used to provide basic statistics as well for very small firms, reducing or eliminating the need to send them census questionnaires. The Enterprise Statistics Program, which publishes combined data from the economic censuses, was made possible with the implementation of the integrated census program in 1954.

The range of industries covered in the economic censuses has continued to expand. The Census of Construction Industries began on a regular basis in 1967, and the scope of service industries was broadened in 1967, 1977, and 1987. The Census of Transportation began in 1963 as a set of surveys covering travel, transportation of commodities, and trucks. New for 1987 are publications reporting on business establishments engaged in several transportation industries, paralleling the data on establishments in other sectors. This is part of a gradual expansion in coverage of industries previously subjected to government regulation. The Survey of Minority-Owned Business Enterprises was first conducted as a special project in 1969 and was incorporated into the economic censuses in 1972 along with the Survey of Women-Owned Businesses.

Economic censuses have also been taken in Puerto Rico since 1909, in the Virgin Islands and Guam since 1958, and in the Northern Mariana Islands since 1982.

Statistical reports from the 1982 and earlier censuses provide historical figures for the study of long-term time series, and are available in some large libraries. All of the census data published since 1967 are still available for sale on microfiche from the Census Bureau.

AVAILABILITY OF MORE FREQUENT ECONOMIC DATA

While the censuses provide complete enumerations every 5 years, there are many needs for more frequent data as well. The Census Bureau conducts a number of monthly, quarterly, and annual surveys, the results of which appear in publication series such as *Current Business Reports* (retail and wholesale trade and service industries), the *Annual Survey of Manufactures*, *Current Industrial Reports*, and the *Quarterly Financial Report*. Most of these surveys, while providing more frequent

observations, yield less kind-of-business and geographic detail than the censuses. The *County Business Patterns* program offers annual statistics on the number of establishments, employment, and payroll classified by industry within each county.

SOURCES FOR MORE INFORMATION

More information about the scope, coverage, classification system, data items, and publications for each of the economic censuses and related surveys is published in the *Guide to the 1987 Economic Censuses and Related Statistics*. More information on the methodology, procedures, and history of the censuses will be published in the *History of the 1987 Economic Censuses*. Contact Customer Services for information on availability.

CENSUS OF MANUFACTURES

General

This report, from the 1987 Census of Manufactures, is one of a series of 83 industry reports, each of which provides statistics for individual industries or groups of related industries. Additional separate reports will be issued for each State and the District of Columbia and for special subjects such as type of organization, distribution of sales by class of customer, concentration ratios and water use in manufacturing.

The industry reports include such statistics as number of establishments, employment, payroll, value added by manufacture, cost of materials consumed, capital expenditures, product shipments, etc.

State reports present similar statistics for each State and its important metropolitan statistical areas (MSA's), counties, and places. Selected statistical totals for "all manufacturing" have been shown in the State reports for MSA's with 250 employees or more and for counties and places with 450 employees or more.

The *General Summary* report will contain industry, product class, and geographic area statistics summarized in one report. The introduction to the *General Summary* discusses, at greater length, many of the subjects described in this introduction. For example, the *General Summary* text will discuss the relationship of value added by manufacture to National income by industry of origin, the changes in statistical concepts over the history of the censuses, and the valuation problems arising from intracompany transfers between manufacturing plants of a company and between manufacturing plants and sales offices and sales branches of a company.

Scope of Census and Definition of Manufacturing

The 1987 Census of Manufactures covers all establishments with one paid employee or more primarily engaged in manufacturing as defined in the *1987 Standard Industrial*

*Classification (SIC) Manual*¹. This is the system of industrial classification developed by experts on classification in Government and private industry under the guidance of the Office of Information and Regulatory Affairs, Office of Management and Budget. This classification system is used by Government agencies as well as many organizations outside the Government.

The SIC Manual defines manufacturing as the mechanical or chemical transformation of substances or materials into new products. The assembly of component parts of products also is considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills that characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfers to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. Some manufacturers in a few industries sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salespersons. Some activities of a service nature (enameling, engraving, etc.) are included in manufacturing when they are performed primarily for trade. They are considered nonmanufacturing when they are performed primarily to the order of the household consumer.

Relationship Between Annual Survey of Manufactures and Census of Manufactures

The Bureau of the Census conducts the annual survey of manufactures (ASM) in each of the 4 years between the censuses of manufactures. The ASM is a probability-based sample of approximately 56,000 establishments and collects the same industry statistics (employment, payroll, value of shipments, etc.) as the census of manufactures. In addition to collecting the information normally requested on the census form, the establishments in the ASM sample are requested to supply information on assets, capital expenditures, retirements, depreciation, rental payments, supplemental labor costs, costs of purchased services, and foreign content of materials consumed. Except for supplemental labor costs, the extra ASM items are collected only in census years.

Establishment Basis of Reporting

The census of manufactures is conducted on an establishment basis. A company operating at more than one location is required to file a separate report for each location. The ASM also is conducted on an establishment basis, but separate reports are filed for just those establishments selected in the sample. Companies engaged in

distinctly different lines of activity at one location are requested to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

In 1987, as in earlier years, a minimum size limit was set for inclusion of establishments in the census. All establishments employing one person or more at any time during the census year are included. The same size limitation has applied since 1947 in censuses and annual surveys of manufactures. In the 1939 and earlier censuses, establishments with less than \$5,000 value of products were excluded. The change in the minimum size limit in 1947 does not appreciably affect the historical comparability of the census figures except for data on number of establishments for a few industries. This report excludes information for separately operated administrative offices, warehouses, garages, and other auxiliary units that service manufacturing establishments of the same company (see Auxiliaries).

Manufacturing Universe and Census Report Forms

The 1987 Census of Manufactures universe includes approximately 350,000 establishments. The amounts of information requested from manufacturing establishments were dependent upon a number of factors. The more important considerations were the size of the company and whether it was included in the annual survey of manufactures. The methods of obtaining information for the various subsets of the universe to arrive at the aggregate figures shown in the publication are described below:

1. Small Single-Establishment Companies Not Sent a Report Form

In the 1987 Census of Manufactures, approximately 150,000 small single-establishment companies were excused from filing reports. Selection of these small establishments was done on an industry-by-industry basis and was based on annual payroll and total shipments data as well as on the industry classification codes contained in the administrative records of Federal agencies. The cutoffs were selected so that these administrative-records cases would account for no more than 3 percent of the value of shipments for all manufacturing. Generally, all single-establishment companies with less than five employees were excused, while all establishments with more than 20 employees were mailed forms.

Information on the physical location of the establishment, as well as information on payrolls, receipts (shipments), and industry classification, was obtained from the administrative records of other Federal agencies under special arrangements, which safeguarded their confidentiality. Estimates of data for these small establishments were developed using industry averages in conjunction with the administrative information. The value of shipments and cost of materials

¹Standard Industrial Classification Manual: 1987: For sale by Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, Stock No. 041-001-00314-2.

were not distributed among specific products and materials for these establishments but were included in the product and material "not specified by kind" (n.s.k.) categories.

The industry classification codes included in the administrative-records files were assigned on the basis of brief descriptions of the general activity of the establishment. As a result, an indeterminate number of establishments were erroneously coded at the four-digit SIC level. This was especially true whenever there was a relatively fine line of demarcation between industries or between manufacturing and nonmanufacturing activity.

Sometimes these administrative-record cases were only given a two- or three-digit SIC group. For the 1987 Census of Manufactures, these establishments were sent a separate classification form, which requested information on the products and services of the establishment. This form was used to code many of these establishments to the four-digit SIC level. Establishments that did not return the classification form were coded later to those four-digit SIC industries identified as "not elsewhere classified" (n.e.c.) within the given two- or three-digit industry groups.

As a result of these situations, a number of small establishments may have been misclassified by industry. However, such possible misclassification has no significant effect on the statistics other than on the number of companies and establishments.

The total establishment count for individual industries should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 employees or more are far more reliable than the count of total number of establishments.

2. Establishments Sent a Report Form

The 200,000 establishments covered in the mail canvass were divided into three groups:

- a. **ASM sample establishments**—This group consisted of approximately 56,000 establishments covering all the units of large manufacturing establishments as well as a sample of the medium and smaller establishments. The probability of selection was proportionate to size (see appendix, Annual Survey of Manufactures).

In a census of manufactures year, the ASM report form (MA-1000) replaces the first page of the regular census form for those establishments included in the ASM. In addition to information on employment, payroll, and other items normally requested on the regular census form, establishments in the ASM sample were requested to supply information on assets, capital expenditures, retirements, depreciation, rental payments, supplemental labor costs, and costs of purchased services. See appendix A, section 2, for an explanation of these items.

The census part of the report form is one of approximately 200 versions containing product, material, and special inquiries. The diversity of manufacturing activities necessitated the use of these many forms to canvass the 459 manufacturing industries. Each form was developed for a group of related industries.

Appearing on each form was a list of products primary to the group of related industries as well as secondary products and miscellaneous services that establishments classified in these industries were likely to be performing. Respondents were requested to identify the products, the value of each product, and, in a large number of cases, the quantity of the product shipped during the survey year. Space also was provided for the respondent to describe products not specifically identified on the form.

The report form also contained a materials-consumed inquiry, which varied from form to form depending on the industries being canvassed. The respondents were asked to review a list of materials generally used in their production processes. From this list, each establishment was requested to identify those materials consumed during the survey year, the cost of each, and, in certain cases, the quantity consumed. Once again, space was provided for the respondent to describe significant material not identified on the form.

Finally, a wide variety of special inquiries was included to measure activities peculiar to a given industry, such as operations performed and equipment used.

- b. **Large and medium establishments (non-ASM)**—Approximately 84,000 establishments were included in this group. A variable cutoff, based on administrative-records payroll data and determined on an industry-by-industry basis, was used to select those establishments that were to receive one of the approximately 200 census of manufactures regular forms. The first page, requesting establishment data for items such as employment and payroll, was standard but did not contain the detailed statistics included on the ASM form. The product, material, and special inquiry sections supplied were based on the historical industry classification of the establishment.
- c. **Small single-establishment companies (non-ASM)**—This group consisted of approximately 60,000 establishments. For those industries where application of the variable cutoff for administrative-records cases resulted in a large number of small establishments being included in the mail canvass, an abbreviated or "short" form was used. These establishments received one of the approximately 80 versions of the short form, which requested

summary product and material data and totals but no details on employment, payrolls, cost of materials, inventories, and capital expenditures.

Use of the short form has no adverse effect on published totals for the industry statistics; the same data were collected on the short form as on the long form. However, detailed information on materials consumed was not collected on the short form; thus its use would increase the value of the n.s.k. categories.

Auxiliaries

In this industry report, the data on employment and payroll are limited to operating manufacturing establishments. The census report form filed for auxiliaries (ES-9200) requested a description of the activity of the establishments serviced. However, the manufacturing auxiliaries were coded only to the two-digit major group of the establishments they served; whereas, the operating establishments were coded to a four-digit manufacturing industry. Data for the approximately 10,000 separately operated auxiliaries are included in the geographic area series and in a report issued as part of the 1987 Enterprise Statistics Survey.

Auxiliaries are establishments whose employees are primarily engaged in performing supporting services for other establishments of the same company, rather than for the general public or for other business firms. They can be at different locations from the establishments served or at the same location as one of those establishments but not operating as an integral part thereof and serving two establishments or more. Where auxiliary operations are conducted at the same location as the manufacturing operation and operate as an integral part thereof, they usually are included in the report for the operating manufacturing establishment.

Included in the broad category of auxiliaries are administrative offices. Employees in administrative offices are concerned with the general management of multiestablishment companies, i.e., with the general supervision and control of two units or more, such as manufacturing plants, mines, sales branches, or stores. The functions of these employees may include (1) program planning, including sales research and coordination of purchasing, production, and distribution; (2) company purchasing, including general contracts and purchasing methods; (3) company financial policy and accounting; (4) general engineering, including design of product machinery and equipment, and direction of engineering effort conducted at the individual operation locations; (5) direction of company personnel matters; and (6) legal and patent matters.

Other types of auxiliaries serving the plants or central management of the company include purchasing offices, sales promotion offices, research and development organizations, etc.

Industry Classification of Establishments

Each of the establishments covered in the census was classified in 1 of 459 manufacturing industries in accordance with the industry definitions in the 1987 SIC Manual. The 1987 edition of this manual represents a major revision for manufacturing industries from the 1972 edition and its 1977 supplement. Appendix A of the 1987 Manual notes the revisions in the four-digit industry levels between 1972/77 and 1987.

An industry is generally defined as a group of establishments producing the same product or a closely related group of products. The product groupings from which industry classifications are derived are based on considerations such as similarity of manufacturing processes, types of materials used, types of customers, and the like. The resulting group of establishments must be significant in terms of number, value added by manufacture, value of shipments, and number of employees. The system operates in such a way that the definitions progressively become narrower with successive additions of numerical digits. For 1987, there are 20 major groups (two-digit SIC), 139 industry groups (three-digit SIC), and 459 industries (four-digit SIC). This represents an expansion of four-digit industries from 452 in 1972/77 and a reduction of three-digit groups from 143 in 1972/77. Product classes and products of the manufacturing industries have been assigned codes based on the industry from which they originate. There are about 11,000 products identified by a seven-digit code. The seven-digit products are considered the primary products of the industry with the same four digits.

Accordingly, an establishment is usually classified in a particular industry on the basis of its major activity during a particular year, i.e., production of the products primary to that industry exceeds, in value, production of the products primary to any other single industry. In a few instances, however, the industry classification of an establishment is not only determined by the products it makes but also by the process employed in operations. Refining of nonferrous metals from ore or rolling and drawing of nonferrous metals (processes which involve heavy capitalization in specialized equipment) would be classified according to the process used during a census year. These establishments then would be "frozen" in that industry during the following ASM years.

In either a census or ASM year, establishments included in the ASM sample with certainty weight, other than those involved with heavily capitalized activities described above, are reclassified by industry only if the change in the primary activity from the prior year is significant or the change has occurred for 2 successive years. This procedure prevents reclassification when there are minor shifts in product mix.

In ASM years, establishments included in the ASM sample with noncertainty weight are not shifted from one industry classification to another. They are retained in the industry where they were classified in the base census year (see appendix, Annual Survey of Manufactures).

However, in the following census year, these ASM plants are allowed to shift from one industry to another.

The result of these rules covering the switching of plants from one industry classification to another is that, at the aggregate level, some industries comprise different mixes of establishments between survey years, and establishment data for such industry statistics as employment and payroll may be tabulated in different industries between survey years. Hence, comparisons between prior-year and current-year published totals, particularly at the four-digit SIC level, should be viewed with caution. This is particularly true for the comparison between the data shown for a census year versus the data shown for the previous ASM year.

As previously noted, the small establishments that may have been misclassified by industry are usually administrative-record cases whose industry codes were assigned on the basis of incomplete descriptions of the general activity of the establishment. Such possible misclassifications have no significant effect on the statistics other than on the number of companies and establishments.

While some establishments produce only the primary products of the industry in which they are classified, all establishments of an industry rarely specialize to this extent. The industry statistics (employment, inventories, value added by manufacture, total value of shipments including resales and miscellaneous receipts, etc.) shown in tables 1a through 5a, therefore, reflect not only the primary activities of the establishments in that industry but also their secondary activities. The product statistics in table 6a represent the output of all establishments whether or not they are classified in the same industry as the product. For this reason, in relating the industry statistics, especially the value of shipments to the product statistics, the composition of the industry's output shown in table 5b should be considered.

The extent to which industry and product statistics may be matched with each other is measured by two ratios which are computed from the figures shown in table 5b. The first of these ratios, called the primary product specialization ratio, measures the proportion of product shipments (both primary and secondary) of the establishments classified in the industry represented by the primary products of those establishments. The second ratio, called the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

However, establishments making products falling into the same industry category may use a variety of processes and materials to produce them. Also, the same industry classification (based on end products) may include both establishments that are highly integrated and those that put only the finishing touches on an already highly fabricated item. For example, the refrigeration equipment industry includes instances of almost complete integration (production of the compressor, condensing unit, electric motor, casting, stamping of the case, and final assembly) all

carried on at one plant. On the other hand, the condensing unit, the motor, and the case may be purchased and only assembled into the finished product.

In some instances, separate industry categories have been established for integrated and nonintegrated establishments. For other industries, the census provides separate statistics on the production of intermediate commodities made and used in the producing plant. For some industries characterized by many plants of the same company, separate figures on interplant transfers of products usually are shown.

Differences in the integration of production processes, types of operations, and alternatives in types of materials used should be considered when relating the industry statistics (employment, payrolls, value added, etc.) to the product and material data.

Value of Shipments for the Industry Compared With Value of Product Shipments

This report shows value of shipments data for industries and products. In tables 1a through 5a, these data represent the total value of shipments of all establishments classified in a particular industry. The data include the shipments of the products classified in the industry (primary to the industry), products classified in other industries (secondary to the industry), and miscellaneous receipts (repair work, sale of scrap, research and development, installation receipts, and resales). Value of product shipments shown in table 6a represents the total value of all products shipped that are classified as primary to an industry.

CENSUS DISCLOSURE RULES

In accordance with Federal law governing census reports, no data are published that would disclose the data for an individual establishment or company. However, the number of establishments classified in a specific industry is not considered a disclosure, so this information may be released even though other information is withheld.

The disclosure analysis for the industry statistics in tables 1a through 5a of this report is based on the total value of shipments. When the total value of shipments cannot be shown without disclosing information for individual companies, the complete line is suppressed. However, the suppressed data are included in higher-level totals. Additional disclosure analysis is performed for new capital expenditures that can be suppressed even though value of shipments data are publishable.

SPECIAL TABULATIONS

Special tabulations of data collected in the 1987 Census of Manufactures may be obtained on computer tape or in tabular form. The data will be in summary form and subject to the same rules prohibiting disclosure of confidential

information (including name, address, kind of business, or other data for individual business establishments or companies) as are the regular publications.

Special tabulations are prepared on a cost basis. A request for a cost estimate, as well as exact specifications on the type and format of the data to be provided, should be directed to the Chief, Industry Division, Bureau of the Census, Washington, DC 20233.

ABBREVIATIONS AND SYMBOLS

The following abbreviations and symbols are used in this publication:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual companies; data are included in higher level totals.
(NA)	Not available.
(NC)	Not comparable.
(S)	Withheld because estimate did not meet publication standards.
(X)	Not applicable.
(Z)	Less than half the unit shown.
do	Ditto.

n.e.c.	Not elsewhere classified.
n.s.k.	Not specified by kind.
pt.	Part.
r	Revised.
SIC	Standard Industrial Classification.

Other abbreviations, such as lb, gal, yd, doz, bbl, and s tons, are used in the customary sense.

---------------------------	-------------------

DESCRIPTION OF INDUSTRIES AND SUMMARY OF FINDINGS

This report shows 1987 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC code and title

3531	Construction Machinery
3532	Mining Machinery
3533	Oil and Gas Field Machinery
3534	Elevators and Moving Stairways
3535	Conveyors and Conveying Equipment
3536	Hoists, Cranes, and Monorails
3537	Industrial Trucks and Tractors

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account when comparing industry statistics (tables 1 through 5a) with product statistics (table 6) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-establishment companies with up to 20 employees (cutoff varied by industry) were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other Federal agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions included in the 1987 Standard Industrial Classification (SIC) Manual¹. The 1987 edition represents a major revision for manufacturing industries from the 1972 edition and its 1977 supplement. In addition to the 1987 SIC revision, changes were made to the product class

(five-digit) and product code (seven-digit) categories. The product class and product code comparability between the 1987 and 1982 censuses is shown in the appendixes. These appendixes present, in tabular form, the linkage from 1987 to 1982.

All dollar figures included in this report are at prices current for the year specified and, therefore, unadjusted for changes in price levels. Consequently, when making comparisons to prior years, users should take into consideration the inflation that has occurred.

INDUSTRY 3531, CONSTRUCTION MACHINERY

This industry is made up of establishments primarily engaged in manufacturing heavy machinery and equipment of a type used primarily by the construction industries, such as bulldozers; concrete mixers; cranes, except industrial plant overhead and truck-type cranes; dredging machinery; pavers; and power shovels. Also included in this industry are establishments primarily engaged in manufacturing forestry equipment and certain specialized equipment, not elsewhere classified, similar to that used by construction industries, such as elevating platforms, ship cranes and capstans, aerial work platforms, and automobile wrecker hoists. Establishments primarily engaged in manufacturing mining equipment are classified in industry 3532; those manufacturing well-drilling machinery are classified in industry 3533; those manufacturing industrial plant overhead traveling cranes are classified in industry 3536; and those manufacturing industrial truck-type cranes are classified in industry 3537. Products of this industry also are collected in the Current Industrial Report MA-35D, Construction Machinery.

The 1987 definition of this industry is the same as that used in the 1972/7 Standard Industrial Classification (SIC) system. The SIC number and title also are the same. However, Product Class 3531K, Other Construction Machinery and Equipment (Excluding Parts), now includes automobile hoists (used on tow trucks) and personnel aerial work platforms not for mounting on vehicles (integral units)(self-propelled and not self-propelled). These products were previously classified in industries 3536 and 3537, respectively.

In the 1987 Census of Manufactures, Industry 3531, Construction Machinery, had employment of 81.2 thousand. The employment figure was 30 percent below the 115.5 thousand reported in 1982. Compared with 1986, employment decreased 8 percent. The 1986 data are based on the Bureau's annual survey of manufactures (ASM), which is a sample survey conducted each year

¹Standard Industrial Classification Manual: 1987. For sale by Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Stock No. 041-001-00314-2.

between censuses. The leading States in employment in 1987 were Illinois, Iowa, Wisconsin, and Pennsylvania, accounting for 54 percent of the industry's employment. This represents a shift from 1982 when Illinois, Iowa, Wisconsin, and Ohio accounted for 56 percent of the industry's employment.

The total value of shipments for establishments classified in this industry was \$12.8 billion.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3531 shipped \$11.2 billion of construction machinery products considered primary to the industry, \$689.2 million of secondary products, and had \$883.8 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 94 percent (specialization ratio). In 1982, the specialization ratio was 91 percent.

Establishments in this industry also accounted for 96 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). In 1982, the coverage ratio was 94 percent. The products primary to industry 3531, no matter in what industry they were produced, appear in table 6a and aggregate to \$11.7 billion. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the construction machinery industry amounted to \$6.9 billion. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 7 percent of total value of shipments.

INDUSTRY 3532, MINING MACHINERY

This industry is made up of establishments primarily engaged in manufacturing heavy machinery and equipment used by the mining industries, such as coal breakers, mine cars, mineral cleaning machinery, concentration machinery, core drills, coal cutters, portable rock drills, and rock crushing machinery. Establishments primarily engaged in manufacturing construction machinery are classified in industry 3531; those manufacturing well drilling machinery are classified in industry 3533; and those manufacturing coal and ore conveyors are classified in industry 3535. Products of this industry also are collected in the Current Industrial Report MA-35F, Mining Machinery, Mineral Processing Equipment.

The 1987 definition of this industry is the same as that used in the 1972/7 Standard Industrial Classification (SIC) system. The SIC number and title also are the same.

In the 1987 Census of Manufactures, Industry 3532, Mining Machinery, had employment of 13.6 thousand. The employment figure was 45 percent below the 24.6 thousand reported in 1982. Compared with 1986, employment decreased 7 percent. The 1986 data are based on the Bureau's annual survey of manufactures (ASM), which is a sample survey conducted each year between censuses. The leading States in employment in 1987 were Pennsylvania, Virginia, West Virginia and Ohio. These same States were the leaders in 1982.

The total value of shipments for establishments classified in this industry was \$1.5 billion.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3532 shipped \$1.2 billion of mining machinery products considered primary to the industry, \$194.3 million of secondary products, and had \$148.7 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 86 percent (specialization ratio). In 1982, the specialization ratio was 90 percent.

Establishments in this industry also accounted for 86 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). In 1982, the coverage ratio was 89 percent. The products primary to industry 3532, no matter in what industry they were produced, appear in table 6a and aggregate to \$1.4 billion. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the mining machinery industry amounted to \$748.5 million. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 13 percent of total value of shipments.

INDUSTRY 3533, OIL AND GAS FIELD MACHINERY

This industry is made up of establishments primarily engaged in manufacturing machinery and equipment for use in oil and gas fields or for drilling water wells, including portable drilling rigs. Establishments primarily engaged in manufacturing offshore oil and gas well drilling and production platforms are classified in industry 3731. Products

of this industry also are collected in the Current Industrial Report MA-35F, Mining Machinery, Mineral Processing Equipment.

The 1987 definition of this industry is the same as that used in the 1972/7 Standard Industrial Classification (SIC) system. The SIC number and title also are the same.

In the 1987 Census of Manufactures, Industry 3533, Oil and Gas Field Machinery, had employment of 24.8 thousand. The employment figure was 75 percent below the 98.5 thousand reported in 1982. Compared with 1986, employment decreased 24 percent. The 1986 data are based on the Bureau's annual survey of manufactures (ASM), which is a sample survey conducted each year between censuses. The leading States in employment in 1987 were Texas, Oklahoma, California, and Louisiana, accounting for 90 percent of the industry's employment. These same States were the leaders in 1982, when they accounted for 91 percent of the industry's employment.

The total value of shipments for establishments classified in this industry was \$2.7 billion.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3533 shipped \$2.2 billion of oil and gas field machinery products considered primary to the industry, \$161.7 million of secondary products, and had \$373.9 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 93 percent (specialization ratio). In 1982, the specialization ratio was 92 percent.

Establishments in this industry also accounted for 96 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). In 1982, the coverage ratio also was 96 percent. The products primary to industry 3533, no matter in what industry they were produced, appear in table 6a and aggregate to \$2.3 billion. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the oil and gas field machinery industry amounted to \$1.2 billion. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 14 percent of total value of shipments.

INDUSTRY 3534, ELEVATORS AND MOVING STAIRWAYS

This industry is made up of establishments primarily engaged in manufacturing passenger or freight elevators,

automobile lifts, dumbwaiters, and moving stairways. Establishments primarily engaged in manufacturing commercial conveyor systems and equipment are classified in industry 3535, and those manufacturing farm elevators are classified in industry 3523.

The 1987 definition of this industry is the same as that used in the 1972/7 Standard Industrial Classification (SIC) system. The SIC number and title also are the same.

In the 1987 Census of Manufactures, Industry 3534, Elevators and Moving Stairways, had employment of 10.2 thousand. The employment figure was 22 percent below the 13.0 thousand reported in 1982. Compared with 1986, employment decreased 13 percent. The 1986 data are based on the Bureau's annual survey of manufactures (ASM), which is a sample survey conducted each year between censuses. The leading States in employment in 1987 were Indiana, Mississippi, Ohio, and New York. This represents a shift from 1982 when New York, Ohio, California, and Mississippi were the leading States in employment.

The total value of shipments for establishments classified in this industry was \$1.1 billion.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3534 shipped \$991.2 million of elevator and moving stairway products considered primary to the industry, \$15.5 million of secondary products, and had \$77.8 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 98 percent (specialization ratio). In 1982, the specialization ratio was 96 percent.

Establishments in this industry also accounted for 94 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). In 1982, the coverage ratio was 95 percent. The products primary to industry 3534, no matter in what industry they were produced, appear in table 6a and aggregate to \$1.1 billion. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the elevators and moving stairways industry amounted to \$565.3 million. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 10 percent of total value of shipments.

INDUSTRY 3535, CONVEYORS AND CONVEYING EQUIPMENT

This industry is made up of establishments primarily engaged in manufacturing conveying equipment for installation in factories, warehouses, mines, and other industrial and commercial establishments. Establishments primarily engaged in manufacturing farm elevators and conveyors are classified in industry 3523; those manufacturing passenger or freight elevators, dumbwaiters, and moving stairways are classified in industry 3534; and those manufacturing overhead traveling cranes and monorail systems are classified in industry 3536.

The 1987 definition of this industry is the same as that used in the 1972/7 Standard Industrial Classification (SIC) system. The SIC number and title also are the same.

In the 1987 Census of Manufactures, Industry 3535, Conveyors and Conveying Equipment, had employment of 31.5 thousand. The employment figure was 14 percent below the 36.6 thousand reported in 1982. The leading States in employment in 1987 were Michigan, Ohio, Kentucky, and Illinois. This represents a shift from 1982 when Michigan, Ohio, Pennsylvania, and Kentucky were the leading States in employment.

The total value of shipments for establishments classified in this industry was \$3.4 billion.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3535 shipped \$2.9 billion of conveyors and conveying equipment products considered primary to the industry, \$237.1 million of secondary products, and had \$297.5 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 92 percent (specialization ratio). In 1982, the specialization ratio was 89 percent.

Establishments in this industry also accounted for 92 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). In 1982, the coverage ratio was 91 percent. The products primary to industry 3535, no matter in what industry they were produced, appear in table 6a and aggregate to \$3.1 billion. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the conveyors and conveying equipment industry amounted to \$1.6 billion. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were

obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 19 percent of total value of shipments.

INDUSTRY 3536, HOISTS, CRANES, AND MONORAILS

This industry is made up of establishments primarily engaged in manufacturing overhead traveling cranes, hoists, and monorail systems for installation in factories, warehouses, marinas, and other industrial and commercial establishments. Establishments primarily engaged in manufacturing cranes except industrial types, automobile wrecker hoists, and aerial work platforms are classified in industry 3531, and those manufacturing aircraft loading hoists are classified in industry 3537.

The 1987 definition of this industry has been revised from that used in the 1972 Standard Industrial Classification (SIC) manual. However, the SIC number and title are unchanged. Automobile hoists (used on tow trucks) and automatic stacking machines were in industry 3536; these products are now classified in industry 3531 and 3537, respectively. The effect of the revisions on the data is summarized in tables 1c-1 and 1c-2. During the 1987 processing, each establishment was classified according to both the old and new SIC. Table 1c-1 shows the distribution of the new industry among the old SIC classifications. Table 1c-2 shows the distribution of the old SIC-based industries among the new SIC classifications.

In the 1987 Census of Manufactures, Industry 3536, Hoists, Cranes, and Monorails, had employment of 7.0 thousand. The leading States in employment in 1987 were Ohio, Michigan, Pennsylvania and Wisconsin, accounting for 43 percent of the industry's employment.

The total value of shipments for establishments classified in this industry was \$675.4 million.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3536 shipped \$581.3 million of hoists, cranes, and monorail products considered primary to the industry, \$42.4 million of secondary products, and had \$51.7 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 93 percent (specialization ratio).

Establishments in this industry also accounted for 78 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). The products primary to industry 3536, no matter in what industry they were produced, appear in table 6a and aggregate to \$745.6 million. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the

hoists, cranes, and monorails industry amounted to \$318.7 million. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 17 percent of total value of shipments.

INDUSTRY 3537, INDUSTRIAL TRUCKS AND TRACTORS

This industry is made up of establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, stackers (truck type), and related equipment, used for handling materials on floors and paved surfaces in and around industrial and commercial plants, depots, docks, airports, and terminals. Establishments primarily engaged in manufacturing motor vehicles and motor vehicle type trailers are classified in industry group 371; those manufacturing farm type wheel tractors are classified in industry 3523; those manufacturing tractor shovel loaders and tracklaying tractors are classified in industry 3531; and those manufacturing wood pallets and skids are classified in industry 2448.

The 1987 definition of this industry has been revised from that used in the 1972 Standard Industrial Classification (SIC) manual. However, the SIC number and title are unchanged. Product class 35373 now includes automatic stacking machines, and product class 35374 now includes parts for automatic stacking machines. Automatic stacking machines and parts were previously classified in industry 3536. Personnel aerial work platforms not for mounting on vehicles (integral units)(self-propelled and not self-propelled) were in industry 3537; these integral unit aerial work platforms are now classified in industry 3531. The effect of the revisions on the data is summarized in tables 1c-1 and 1c-2. During the 1987 processing, each establishment was classified according to both the old and new SIC.

Table 1c-1 shows the distribution of the new industry among the old SIC classifications. Table 1c-2 shows the distribution of the old SIC-based industries among the new SIC classifications.

In the 1987 Census of Manufactures, Industry 3536, Industrial Trucks and Tractors, had employment of 20.1 thousand. The leading States in employment in 1987 were Ohio, New York, California, and North Carolina.

The total value of shipments for establishments classified in this industry was \$2.4 billion.

Establishments in virtually all industries ship secondary products as well as products primary to the industry to which they are classified and have some miscellaneous receipts, such as resales and contract receipts. Industry 3537 shipped \$2.1 billion of industrial trucks and tractor products considered primary to the industry, \$111.4 million of secondary products, and had \$205.7 million of miscellaneous receipts, resales, and contract work. Thus, the ratio of primary products to the total of both secondary and primary products shipped by establishments in the industry was 95 percent (specialization ratio).

Establishments in this industry also accounted for 94 percent of products considered primary to the industry no matter where they actually were produced (coverage ratio). The products primary to industry 3537, no matter in what industry they were produced, appear in table 6a and aggregate to \$2.3 billion. For further explanation of specialization and coverage ratios, see table 5b and the appendixes.

The total cost of materials, services, and fuels and electric energy used by establishments classified in the industrial trucks and tractors industry amounted to \$1.5 billion. Data on specific materials consumed appear in table 7.

Single-establishment companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 15 percent of total value of shipments.

Table 1a-1. Historical Statistics for the Industry (1987 Basis): 1987 and Earlier Years

[Industries with only 1987 data are revised for 1987. Table 1a-2 contains historical data on the old SIC basis. See table 1c-1 for composition of the new industry on the old SIC basis. Excludes data for auxiliaries. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Year ¹	All establishments ³			All employees		Production workers			Value added by manufacture ⁴ (million dollars)	Cost of materials ⁵ (million dollars)	Value of shipments (million dollars)	New capital expenditures ⁶ (million dollars)	End-of-year inventories ⁴ (million dollars)	Ratios

¹In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1972, see 1972 Census of Manufactures, vol. II, table 1a of the Industry chapter.

²For the Census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

³Includes establishments with payroll at any time during year.

⁴Beginning with the 1982 Census of Manufactures, all respondents were requested to report their inventories at (the lower of) cost or market prior to adjustment to LIFO cost. This is a change from prior Censuses and annual surveys of manufactures in which respondents were permitted to value their inventories using any generally accepted accounting method. Consequently, inventories and value added by manufacture are not comparable to prior-year data.

⁵Detailed data on materials consumed by type are shown in table 7.

⁶Detailed data on new machinery and equipment expenditures are provided in table 3c.

⁷Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in the industry.

⁸Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

⁹Estimates for new capital expenditures have associated standard errors of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

¹⁰Industry definition is new for 1987 Census of Manufactures. An explanation of the Standard Industrial Classification revision appears in the Summary of Findings of this report.

Table 1a-2. Historical Statistics for the Industry (1972 Basis): 1987 and Earlier Years

[Table 1a-2 contains the historical data on the old SIC basis. See table 1c-1 for composition of the new industry on the old SIC basis. Excludes data for auxiliaries. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Wisconsin -----	-	13	7	.6	11.9	.4	.7	7.4	28.9	17.4	46.3	(D)	(NA)	(NA)

Note: For qualifications of data, see footnotes on table 1a-1.

¹Payroll and sales data for some small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other Government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time data were tabulated. The following symbols are shown for those States whose estimated value of shipments data based on administrative-record data account for 10 percent or more of figure shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 percent or more.

²Statistics for some producing States have been withheld to avoid disclosing data for individual companies. However, for States with 150 employees or more, number of establishments is shown and employment-size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

Buildings and other structures.....	17.1	2.3	9.8	2.6	11.0	4.5	9.2
Machinery and equipment.....	34.5	7.3	14.7	3.9	15.7	4.5	15.8

Note: Retirements and depreciation data for establishments not included in the ASM sample were extrapolated from the historical ratio of retirements or depreciation to assets. These ratios were developed at the industry level.

¹Data on new machinery and equipment expenditures by type are provided in table 3c.

Table 3c. Supplemental Industry Statistics Based on Sample Estimates: 1987

[For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Item	Construction machinery (SIC 3531)		Mining machinery (SIC 3532)		Oil and gas field machinery (SIC 3533)		Elevators and moving stairways (SIC 3534)

¹For description of relative standard error of estimate, see Qualifications of the Data in appendixes.

²Measure of extent to which respondents reported each item. Derived for each item by calculating the ratio of weighted employment for those sample establishments that reported the specific inquiry to total employment for all establishments classified in industry. (See appendixes for explanation of sample weight.)

³Detail has been adjusted upwards to account for nonresponse. Inverse of the ratio shown represents a measure of the response to the inquiry. (See appendixes for further explanation.)

⁴Data may understate the true cost of imported parts, components, and supplies since some respondents do not know the origin of these materials. Includes cases where materials were purchased from secondary suppliers or where they were transferred from company-operated warehouses or other distribution points. Direct purchases from foreign suppliers and importers by domestic manufacturing establishments are believed to be reported accurately.

Covered by administrative records ² -----	E9	225	1.2	18.0	.8	1.5	10.5	34.5	70.9	105.4	2.0	18.6

Note: For qualifications of data, see footnotes on table 1a-1. Data shown as a (D) are included in underscored figures above.

¹Payroll and sales data for some small single unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other Government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time data were tabulated. The following symbols are shown for those employment-size classes where estimated data based on administrative record data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 percent or more.

²Report forms were not mailed to small single unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1987 were obtained from administrative records supplied by other agencies of the Federal Government. Those data were then used in conjunction with industry averages to estimate the items shown. Data are also included in respective employment-size classes shown.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1987

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Industry or product class code	Industry or primary product class	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

See footnotes at end of table.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1987—
Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Industry or product class code	Industry or primary product class	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				
3536	Hoists, cranes, and monorails: All establishments in industry -----	175	7.0	175.3	4.2	8.1	90.0	358.1	318.7	675.4	7.0
35363	Establishments with this product class primary:	39	2.7	67.3	1.7	3.2	34.7	156.5	126.3	282.6	3.9
35364	Hoists ----- Overhead traveling cranes and monorail systems ----	46	3.0	81.9	1.7	3.4	42.5	149.5	142.9	291.0	2.3
3537	Industrial trucks and tractors: All establishments in industry -----	467	20.1	476.1	13.0	25.0	250.3	953.7	1 479.5	2 440.2	37.5
35373	Establishments with this product class primary:	130	13.8	346.3	8.7	16.6	175.3	711.6	1 093.4	1 806.9	24.1
35374	Industrial trucks and tractors ----- Parts for industrial trucks and tractors -----	33	2.9	67.8	2.0	3.9	39.5	127.0	159.2	293.1	7.4

Note: For qualifications of data, see footnotes on table 1a-1.

Table 5b. Industry-Product Analysis—Value of Shipments and Primary Product Shipments and Specialization and Coverage Ratios for the Industry: 1987 and Earlier Census Years

[An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Industry and product group code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio col. B ÷ col. 		Number of companies with shipments of \$100,000 or more	Product shipments ¹		Number of companies with shipments of \$100,000 or more	Product shipments ¹	
			Quantity ²	Value (million dollars)		Quantity ²	Value (million dollars)
3532- --	MINING MACHINERY—Con.						
35320 --	Mining machinery, n.s.k.	(NA)	(X)	131.6	(NA)	(X)	100.4
35320 00	Mining machinery, n.s.k., typically for establishments with 10 employees or more (see note)	(NA)	(X)	38.9	(NA)	(X)	46.1
35320 02	Mining machinery, n.s.k., typically for establishments with less than 10 employees (see note)	(NA)	(X)	92.7	(NA)	(X)	54.3
3533- --	OIL AND GAS FIELD MACHINERY						
	Total	(NA)	(X)	2 291.4	(NA)	(X)	9 514.1
35337 --	Rotary oil field and gas field drilling machinery and equipment	(NA)	(X)	698.4	(NA)	(X)	¹⁰ 3 803.6
	Rotary drilling surface equipment:						
35337 11	Blocks, crown and traveling	2	(S)	.3	10	(S)	44.2
35337 12	Draw works and accessories	2	(S)	1.4	25	(S)	214.7
35337 14	Rotary tables	2	(S)	1.4	25	(S)	42.7
35337 15	Elevators, spiders, slips, hooks, links, and connectors	6	(X)	8.5	17	(X)	291.6
35337 16	Swivels and accessories	4	(X)	14.0	14	(X)	69.4
35337 17	Well control equipment (blow-out preventers, etc.)	12	(X)	56.4	27	(X)	768.1
35337 21	Other rotary drilling surface machinery and equipment, including Kelly joints	10	(X)	51.7	30	(X)	276.4
	Rotary drilling subsurface equipment:						
	Bits:						
35337 22	With working part of sintered metal carbide or cermets	8	(S)	213.0	18	*444.4	1 033.8
35337 23	With working part of other material, including diamond	7	(S)	64.4			
	Reamers and stabilizers:						
35337 24	With working part of sintered metal carbide or cermets	3	(X)	(¹¹)	11	(X)	88.2
35337 25	With working part of other material, including diamond	-	(X)	-			
	Coring equipment:						
35337 26	With working part of sintered metal carbide or cermets	2	(X)	(¹¹)	6	(X)	13.9
35337 27	With working part of other material, including diamond	1	(X)	¹¹ 12.5			
35337 44	Tool joints, subs, and connectors	9	(X)	26.8	19	(X)	410.2
35337 45	Drill collars	7	(S)	10.9	12	(S)	162.2
35337 47	Fishing and cutting tools	8	(X)	25.3	16	(X)	143.3
35337 48	Subsea drilling risers	-	(X)	-	18	(X)	209.0
35337 59	Other subsurface rotary drilling equipment	11	(X)	79.8			
35337 00	Parts for rotary drilling equipment, sold separately, except for portable drilling rigs	18	(X)	85.3	(NA)	(X)	(¹⁰)
	Rotary oil field and gas field drilling machinery and equipment, n.s.k.	(NA)	(X)	48.2	(NA)	(X)	36.1
35338 --	Other oil field and gas field drilling machinery and equipment	(NA)	(X)	89.4	(NA)	(X)	¹⁰ 832.4
35338 31	Cable tool drilling machinery and equipment, including both surface and subsurface equipment	-	(X)	-	2	(X)	(¹²)
	Cementing, floating, guiding, and shoe equipment:						
35338 51	Guide shoes, float collars, and combination guide and float shoes	9	(X)	23.4	15	(X)	85.2
35338 55	Other cementing equipment	6	(X)	21.3	16	(X)	78.7
35338 98	Other oil and gas field drilling equipment, except rotary drilling equipment and portable drilling rigs	4	(X)	42.1	22	(X)	¹² 139.3
35338 99	Parts for other oil and gas field drilling equipment, sold separately, except parts for rotary drilling equipment and portable drilling rigs	7	(X)		38	(X)	¹⁰ 517.5
35338 00	Other oil field and gas field drilling machinery and equipment, n.s.k.	(NA)	(X)	2.6	(NA)	(X)	11.7
35339 --	Oil field and gas field production machinery and equipment (except pumps)	(NA)	(X)	869.1	(NA)	(X)	3 035.2
	Production well equipment, surface, subsurface, and subsea:						
35339 12	Christmas tree assemblies, excluding subsea	9	(X)	46.1	11	(X)	228.1
35339 13	Casing and tubing heads and supports	12	(X)	51.7	18	(X)	213.3
35339 14	Chokes, manifolds, and other accessories (excluding subsea manifolds and templates)	9	(X)	57.8	20	(X)	104.6
35339 19	Rodless oil lifting machinery and equipment (except pumps)	7	(X)	25.6	9	(X)	138.5
35339 21	Subsea Christmas tree assemblies, manifolds, and templates	2	(X)	(¹³)	6	(X)	50.9
	Rod lifting machinery and equipment, surface, including pumps when they are components of a complete assembly:						
35339 53	Pumping units and accessories, including back crank equipment	5	(D)	(¹³)	35	(NA)	414.0
35339 55	Other surface rod lifting machinery and equipment	3	(X)	(¹³)			
35339 57	Subsurface rod lifting equipment (sucker rods), except pumps	6	(X)	52.7	12	**4 989.7	198.0
35339 61	Packers	6	(X)	159.4	15	(X)	384.9
35339 65	Screens, tubing, catchers, etc.	3	(X)	¹³ 107.5	10	(X)	33.7
35339 71	Oil and gas separating, metering, and treating equipment	12	(S)	58.6	36	(S)	246.8
35339 98	Other oil and gas field production machinery and tools	31	(X)	234.5	61	(X)	856.3
35339 92	Parts for oil and gas field production machinery and tools, sold separately (excluding parts for portable drilling rigs and other drilling equipment)	21	(X)	31.3	51	(X)	134.7
35339 00	Oil field and gas field production machinery and equipment (except pumps), n.s.k.	(NA)	(X)	43.8	(NA)	(X)	31.4

See footnotes at end of table.

Table 6a-1. Product and Product Classes—Quantity and Value of Shipments by All Producers: 1987 and 1982—Con.

[Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see Value of Shipments in appendixes. For comparability of product classes and product codes between 1982 and 1987, see appendixes. For meaning of abbreviations and symbols, see introductory text]

1987 product code	Product	1987			1982		
		Number of companies with shipments of \$100,000 or more	Product shipments ¹		Number of companies with shipments of \$100,000 or more	Product shipments ¹	
			Quantity ²	Value (million dollars)		Quantity ²	Value (million dollars)
3533- --	OIL AND GAS FIELD MACHINERY—Con.						
3533A --	Portable drilling rigs and parts	(NA)	(X)	224.8	(NA)	(X)	532.3
3533A 10	Portable drilling rigs (mounted and unmounted) used on the surface (above ground) (for additional detail, see Current Industrial Report MA-35F, Mining Machinery and Mineral Processing Equipment)	18	(X)	147.8	40	(X)	¹⁴ 115.4
3533A 78	Parts for portable drilling rigs used on the surface (above ground) (for additional detail, see Current Industrial Report MA-35F, Mining Machinery and Mineral Processing Equipment)	17	(X)	69.0	35	(X)	116.9
3533A 00	Portable drilling rigs and parts, n.s.k.	(NA)	(X)	8.1	(NA)	(X)	(¹⁴)
3533B --	Oil and gas field derricks and well surveying machinery	(NA)	(X)	97.7	(NA)	(X)	737.2
3533B 21	Derricks, oil and gas field, substructures, and accessories—regular and portable (including equipment shipped "knocked down" and assembled on site)	2	(D)	(¹⁵)	30	(S)	¹⁴ 443.7
3533B 32	Well surveying machinery and equipment, excluding well logging equipment	5	(X)	17.9	25	(X)	277.5
3533B 34	Well logging equipment	7	(X)	¹⁵ 75.6			
3533B 00	Oil and gas field derricks and well surveying machinery, n.s.k.	(NA)	(X)	4.2	(NA)	(X)	¹⁴ 16.0
35330 --	Oil and gas field machinery, n.s.k.	(NA)	(X)	312.0	(NA)	(X)	573.4
35330 00	Oil and gas field machinery, n.s.k., typically for establishments with 10 employees or more (see note)	(NA)	(X)	127.3	(NA)	(X)	381.2
35330 02	Oil and gas field machinery, n.s.k., typically for establishments with less than 10 employees (see note)	(NA)	(X)	184.8	(NA)	(X)	192.2
3534- --	ELEVATORS AND MOVING STAIRWAYS						
	Total	(NA)	(X)	1 053.2	(NA)	(X)	1 019.7
35341 --	Elevators and moving stairways	(NA)	(X)	752.8	(NA)	(X)	747.3
	Elevators (except farm and portable):						
	Electric passenger (except residence lifts):						
35341 05	Geared	16	(S)	165.2	14	(S)	207.5
35341 07	Gearless	12	(S)	48.6	7	(S)	169.5
35341 12	Hydraulic passenger	18	(S)	264.9	19	(S)	166.9
35341 13	Electric freight	9	(S)	11.0	6	(S)	5.3
35341 15	Hydraulic freight	14	(S)	24.4	13	(S)	21.0
35341 31	Automobile lifts (service station and garage type)	7	39	112.3	8	19	48.9
35341 51	Moving stairways, escalators, and moving walkways	6	(S)	60.5	5	(S)	48.3
35341 96	Other nonfarm elevators, including sidewalk elevators, dumb waiters, man lifts, hand-operated freight elevators, residence lifts, etc. (excluding portable elevators/stackers)	22	(S)	55.2	25	(S)	80.1
35341 00	Elevators and moving stairways, n.s.k.	(NA)	(X)	10.9	(NA)	(X)	-
35342 --	Parts and attachments for elevators and moving stairways (sold separately):						
35342 00	Parts and attachments for elevators and moving stairways (sold separately)	42	(X)	198.4	34	(X)	187.4
35340 --	Elevators and moving stairways, n.s.k.	(NA)	(X)	102.0	(NA)	(X)	84.9
35340 00	Elevators and moving stairways, n.s.k., typically for establishments with 20 employees or more (see note)	(NA)	(X)	48.9	(NA)	(X)	61.0
35340 02	Elevators and moving stairways, n.s.k., typically for establishments with less than 20 employees (see note)	(NA)	(X)	53.1	(NA)	(X)	23.9
3535- --	CONVEYORS AND CONVEYING EQUIPMENT						
	Total	(NA)	(X)	3 106.6	(NA)	(X)	2 570.7
35353 --	Unit handling conveyors and conveying systems, except hoists and farm elevators	(NA)	(X)	1 548.3	(NA)	(X)	994.2
35353 09	Gravity conveyors (skate wheel and roller)	34	(X)	63.4	29	(X)	70.7
	Trolley conveyors (overhead systems):						
35353 13	Light to medium duty	31	(X)	130.6	40	(X)	66.8
35353 14	Heavy duty	23	(X)	323.9	18	(X)	122.1
35353 17	Tow conveyors (under floor systems)	14	(X)	32.4	7	(X)	24.3
	Powered conveyors (belt and roller):						
35353 21	Light to medium duty	91	(X)	378.0	85	(X)	301.7
35353 23	Heavy duty	53	(X)	174.1	50	(X)	137.1
35353 35	Pneumatic tube conveyors	7	(X)	37.4	10	(X)	43.5
35353 37	Portable conveyors, except farm	4	(X)	4	4	(X)	1.7
35353 45	All other, such as pallet conveyors, etc.	67	(X)	155.7	49	(X)	195.0
35353 00	Unit handling conveyors and conveying systems, except hoists and farm elevators, n.s.k.	(NA)	(X)	252.7	(NA)	(X)	31.2
35354 --	Parts, attachments, and accessories for unit handling conveyors and conveying systems:						
35354 00	Parts, attachments, and accessories for unit handling conveyors and conveying systems (sold separately)	81	(X)	118.9	80	(X)	107.4

See footnotes at end of table.

Table 6a-1. Product and Product Classes—Quantity and Value of Shipments by All Producers: 1987 and 1982—Con.

[Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. 35370 02	Industrial trucks and tractors, n.s.k., typically for establishments with less than 10 employees (see note) -----	(NA)	(X)	105.4	(NA)	(X)	60.5

Note: In 1987 Census of Manufactures, data for establishments of small single unit companies with up to 20 employees were estimated from administrative record data rather than data actually collected from respondents. Employment cutoffs used for administrative records for each industry and shipments figures are included in code ending with "002". In both 1987 and 1982 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (five-digit) followed by "00" or to appropriate product group code (four-digit) followed by "000".

¹Data reported by all producers, not just those with shipments of \$100,000 or more.

²For some establishments, data have been estimated from central unit values which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * 10 to 19 percent estimated; ** 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

³For 1982, data for product code 3531E 00 included parts sold separately.

⁴For 1982, data for attachments (sold separately) for tractors in product codes 3531A 00, 3531B 00, and 3531C 00 were included in product code 3531M 01.

⁵For 1987, data for product codes 3531K 25 and 3531K 61 are combined with product code 3531K 97 to avoid disclosing data for individual companies.

⁶For 1982, data for product codes 3531K 25 and 3531K 27 were combined with product code 3531K 97 to avoid disclosing data for individual companies.

⁷For 1982, data for product code 3531K 00 were included with product code 3531M 00.

⁸For 1982, data for parts for personnel aerial work platforms not for mounting on vehicles (integral units) were included with product code 35374 19.

⁹For 1987, data for product code 35329 41 are combined with product code 35329 43 to avoid disclosing data for individual companies.

¹⁰For 1982, data for product code 35337 61 were included with product 35338 99.

¹¹For 1987, data for product codes 35337 24 and 35337 26 are combined with product code 35337 27 to avoid disclosing data for individual companies.

¹²For 1982, data for product code 35338 31 were combined with product code 35338 98 to avoid disclosing data for individual companies.

¹³For 1987, data for product codes 35339 21, 35339 53, and 35339 55 are combined with product code 35339 65 to avoid disclosing data for individual companies.

¹⁴For 1982, data for product code 3533A 00 were included with product code 3533B 00.

¹⁵For 1987, data for product code 3533B 21 are combined with product code 3533B 34 to avoid disclosing data for individual companies.

¹⁶For 1987, data for product code 35355 41 are combined with product code 35355 45 to avoid disclosing data for individual companies.

¹⁷For 1987, data for product code 35363 15 are combined with product code 35363 37 to avoid disclosing data for individual companies.

¹⁸For 1982, data for product codes 35363 32 and 35363 34 included air hoists only. Data for other nonelectric chain and wire rope hoists were included with product code 35363 38.

¹⁹For 1982, data for product codes 35364 01, 35364 02, 35364 03, 35364 04, and 35364 05 included only electric overhead traveling cranes. All nonelectric overhead traveling cranes were included with product code 35364 06.

²⁰For 1982, data for product 35364 17 were included with product code 35364 54.

²¹For 1982, data for product codes 35373 01 and 35373 02 included electric motor powered operator riding work trucks not fitted with lifting or handling equipment.

²²For 1982, data for product codes 35373 03, 35373 08, and 35373 16 were included with product code 35373 18.

²³For 1987, data for product code 35373 06 are combined with product code 35373 08 to avoid disclosing data for individual companies.

²⁴For 1982, data for product codes 35373 05 and 35373 06 included internal combustion and other nonelectric powered operator riding work trucks not fitted with lifting or handling equipment.

Table 6a-1. Product and Product Classes—Quantity and Value of Shipments by All Producers: 1987 and 1982—Con.

²⁵For 1982, data for product code 35373 15 were included with product code 35373 17. This figure represents industrial tractors only. Electric motor powered operator riding work trucks not fitted with lifting or handling equipment were included with product codes 35373 01 and 35373 02. Internal combustion or other nonelectric powered operator riding work trucks not fitted with lifting or handling equipment were included with product codes 35373 05 and 35373 06.

²⁶For 1987, data for product code 35373 18 are combined with product code 35373 25 to avoid disclosing data for individual companies.

²⁷For 1982, data for product code 35373 25 were not collected separately, but were included with product code 35373 39.

Table 6a-2. Related Products From Current Industrial Reports Series—Value of Shipments by All Producers: 1987 and 1982

3531F 74	15,000 lb through 21,999 lb gross weight (basic unit) do..			(7)	(7)
3531F 76	22,000 lb through 26,999 lb gross weight (basic unit) do..			(7)	(7)
3531F 78	27,000 lb through 33,999 lb gross weight (basic unit) do..	573	73.1	(7)	(7)
3531F 80	34,000 lb or more gross weight (basic unit) do..			7497	739.3
	Pavers, not self-propelled do..	447	2.7	(NA)	(NA)
	Asphalt plants (including cold mix central plants):				
	Central mixing plants (batch-type and continuous-				
	type) tons per hour (tph):				
3531F 82	Less than 7,500 lb (239 tph) number..	82	14.8	(D)	(D)
3531F 84	7,500 lb or more (240 tph or more) do..	108	60.6	(D)	(D)
	Stabilization mixing equipment:				
3531F 86	Central plants number..	—	—	—	—
3531F 87	Mix-in-place do..	89	4.5	(D)	(D)
	Cold planers/milling machines (self-propelled) (cutting				
	width of drum in inches):				
3531F 88	Less than 26 inches number..			(NA)	(NA)
3531F 90	26 inches to 49 inches do..			(NA)	(NA)
3531F 92	50 inches to 71 inches do..	202	35.8	(NA)	(NA)
3531F 94	72 inches to 85 inches do..			(NA)	(NA)
3531F 96	More than 85 inches do..			(NA)	(NA)
3531F 98	Other concrete and bituminous equipment, not specified				
	above, including mixers, heating kettles, heaters,				
	circulators, travel mix-type, and spreader boxes do..	4 381	39.7	1 938	25.9
3531G —	Scrapers, graders, rollers, off-highway trucks and coal				
	haulers, trailers, wagons, and rough terrain forklifts do..	(X)	1 249.9	(NA)	(NA)
3531G 01	Scraper bowls:				
	Conventional scraper bowls only (dig, carrying, and				
	hauling) used as a part of a self-propelled				
	nonelevating, 2-wheel type scraper, S.A.E. struck				
3531G 03	rating (includes tandem as two bowls) number..	1 999	145.4	(D)	(D)
	Elevating scraper bowls (dig, carrying, and hauling,				
	2- and 4-wheel type, S.A.E. heaped rating (includes				
3531G 05	tandem as two bowls), all sizes do..			(D)	(D)
	All other scraper bowls do..			(D)	(D)
	Motor graders and light maintainers:				
3531G 11	Less than 75 nehp number..	254	8.5		
3531G 13	75 to 129 nehp do..	(D)	(D)		
3531G 15	130 to 144 nehp do..	(D)	(D)	4 066	323.6
3531G 17	145 to 169 nehp do..	1 418	132.1		
3531G 18	170 to 199 nehp do..	(D)	(D)		
3531G 19	200 nehp or more do..	(D)	(D)		
	Rollers and compactors (except handheld):				
	Self-propelled type, ride on:				
	Static compaction equipment (fully ballasted):				
	Smooth steel wheel rollers, tandem (metric tons):				
3531G 21	Less than 3 metric tons number..	1 478	6.5		
3531G 23	3 metric tons to less than 5.5 metric tons do..	456	10.1	1 231	14.3
3531G 25	5.5 metric tons to less than 9 metric tons do..	(8)	(8)		
3531G 27	9 metric tons or more do..	8381	821.8		
	Pneumatic tire rollers (fully ballasted) (maximum				
	wheel load in metric tons):				
3531G 29	Less than 2.5 metric tons number..				
3531G 31	2.5 metric tons or more do..				
	Multiple projection steel wheel rollers:				
3531G 33	Embankment number..	873	80.6	781	45.6
3531G 35	Landfill do..				
	Vibratory compaction equipment (without ballast):				
	Single drum with 1 or 2 drive wheels (metric tons):				
3531G 37	Less than 5 metric tons number..	662	10.7		
3531G 39	5 metric tons to less than 8 metric tons do..	664	27.3		
3531G 41	8 metric tons to less than 12 metric tons do..	(D)	(D)		
3531G 43	12 metric tons or more do..	(D)	(D)		
	Double drum, two drums vibrating (metric tons):				
3531G 45	Less than 3 metric tons number..	654	13.5	3 211	88.7
3531G 47	3 metric tons to less than 5 metric tons do..	249	13.3		
3531G 49	5 metric tons to less than 8 metric tons do..	188	7.9		
3531G 51	8 metric tons to less than 11.3 metric tons do..	474	17.8		
3531G 53	11.3 metric tons or more do..	170	4.0		
3531G 55	Double drum with 1 drum vibrating, all sizes do..	(D)	(D)		
3531G 57	Other compactors (except handheld) do..	(D)	(D)		
	Rollers, towed type:				
3531G 59	Pneumatic tire, including vibratory number..	(D)	(D)		
3531G 61	Static-padfoot, sheepfoot, and bar type do..	(D)	(D)	106	1.1
3531G 63	Vibratory-smooth, padfoot, and sheepfoot drums do..	(D)	(D)		
	Off-highway vehicles:				
3531G 71	Rear dump haulers, all sizes number..	1 351	346.3	973	260.0
3531G 73	Integral self-powered side and bottom dumps, including				
	coal haulers (metric tons), all sizes do..			(D)	(D)
3531G 75	Truck-type, rear dump chassis used as a tractor for				
	towing earth, rock, coal, and ore trailers, all sizes do..	823	45.2	(D)	(D)
3531G 77	Other truck-type tractor chassis, used for log hauling,				
	oilfields, desert, and other uses do..			1 212	151.6
3531G 79	Trailers and wagons (end, side, and bottom dump), all				
	sizes do..			(D)	(D)
	Rough terrain forklifts (integral units only):				
3531G 81	2-wheel drive, vertical mast number..	2 279	87.1	(NA)	(NA)
3531G 83	4-wheel drive, vertical mast do..	94	3.2	(NA)	(NA)
3531G 85	2- and 4-wheel drive, variable reach do..	549	30.7	(NA)	(NA)
3531H —	Construction machinery for mounting on tractors and other				
	prime movers number..	122 655	481.1	61 822	379.6
3531H 39	Sidebooms or pipehandlers (lb lift capacity), all sizes do..			(D)	(D)
3531H 40	Dozers, for crawler and wheel tractors, all sizes do..	2 912	24.9	5 893	70.8

See footnotes at end of table

Table 6a-2. Related Products From Current Industrial Reports Series—Value of Shipments by All Producers: 1987 and 1982—Con.

[Additional detail is provided in the Current Industrial Report series. For meaning of abbreviations and symbols, see introductory text]

1987 product code	Product	1987 product shipments		1982 product shipments	
		Quantity	Value (million dollars)	Quantity	Value (million dollars)
	MA35D, CONSTRUCTION MACHINERY—Con.				
3531H —	Construction machinery for mounting on tractors and other prime movers—Con.				
3531H 41	Winches (towing, logging, and oil-field types) number..	44 403	29.2	9 640	32.6
	Backhoes (including all backhoes whether shipped for mounting, separately, or already mounted on an integral unit):				
3531H 42	Less than 14 ft digging depth number..	8 100	57.1	2 267	13.5
3531H 43	14 ft digging depth or more do..	20 408	192.3	9 872	101.9
3531H 44	Front-end loaders, 3/8 cu yd or more, including shovel loaders do..	27 435	107.7	12 171	59.0
3531H 45	Logging arches do..	(D)	(D)	229	5.3
3531H 46	Rippers and rooters, heavy rear-mounted do..	438	3.2	(D)	(D)
3531H 47	Crawler and rubber-tired, vehicle mounted, continuous ditching and trenching attachments do..	177	.7	(D)	(D)
3531H 48	Fork lift attachments (including only fork lift mast sold separately) do..	6 515	37.1	1 480	9.8
3531H 49	All other construction machinery for mounting, including cranes, cable power control units, hydraulic powercontrol units, etc. do..	(D)	(D)	(D)	(D)
3531K 20	Self-propelled continuous ditchers and trenchers (integral units only) number..	8 610	127.6	5 884	82.3
	Ladder-type digging element:				
3531K 14	Less than 2,000 lb gross weight number..	4 060	16.8	5 884	82.3
3531K 15	2,000 to 4,999 lb gross weight do..	3 466	58.6		
3531K 16	5,000 lb gross weight or more do..	957	44.6		
3531K 18	Wheel-type digging element do..	127	7.6		
3531K 90	Aerial work platforms do..	22 081	529.3	(NA)	(NA)
3531K 81	Boom type, self-propelled do..	3 230	155.3	(NA)	(NA)
3531K 83	Scissors, self propelled do..	8 990	143.3	(NA)	(NA)
3531K 85	Not self-propelled, boom and scissors type do..	288	3.1	(NA)	(NA)
3531K 87	Truck mounted do..	9 573	227.6	(NA)	(NA)
	MA35F, MINING MACHINERY AND MINERAL PROCESSING EQUIPMENT				
3531K 70	Portable crushing, screening, washing, and combination plants number..	686	71.6	306	50.8
	Crushing plants (classification based on the type of crusher first in the processing flow):				
3531K 71	Gyratory (cone) number..	99	17.4	91	19.3
3531K 72	Impact do..	40	5.7	27	4.7
3531K 73	Jaw do..	121	21.0	88	19.0
3531K 74	Roll do..	382	24.6	50	3.9
3531K 75	Screening plants do..	44	1.9	50	3.8
3531K 76	Washing and other plants do..				
35325 —	Underground mining machinery (except parts sold separately) number..	2 198	213.1	(NA)	443.8
35325 14	Cutting machines, shortwall and universal do..	(D)	(D)	30	4.6
	Longwall mining machines, coal type:				
35325 16	Plows number..	(D)	(D)	-	-
35325 18	Shearer or cutter-loader do..	(D)	(D)	(D)	(D)
35325 19	Powered roof supports for longwall mining do..	(D)	(D)	(D)	(D)
	Loader machines, underground mine:				
35325 33	Gathering arm type number..	435	44.4	(⁹)	(⁹)
35325 35	Loader-hauler-dumper (LHD), diesel powered do..			9253	930.6
35325 37	Scoops, shovels, buckets, all types do..			577	34.6
35325 38	All other, including slusher hoists do..			(X)	(D)
	Continuous mining machines, borer, ripper, auger, and drum, including road-heading machines:				
35325 43	Coal number..	126	67.9	404	205.1
35325 42	Other than coal do..				
	Face-haulage vehicles, rubber tired, self-propelled:				
35325 57	Coal number..	107	17.6	436	56.9
35325 59	Other than coal do..	(D)	(D)	52	5.7
35325 58	Ratio feeders and feeder breakers do..	110	10.9	249	17.6
35325 75	Mine cars, track, haulage do..	(D)	(D)	963	9.4
35325 77	Rock dusters do..	141	1.9	490	7.9
	Support vehicles, rubber tired or track mounted:				
	Self-propelled:				
35325 72	Coal number..	122	4.4	211	7.4
35325 73	Other do..	87	5.3	163	4.3
	Towed:				
35325 76	Coal number..	(D)	(D)	320	9.6
35325 78	Other do..	(D)	(D)		
35325 98	Other underground mining machinery, not elsewhere classified do..	952	42.7	(NA)	39.4
35326 —	Mineral processing and beneficiation equipment, excluding parts sold separately number..	4 874	71.8	(NA)	92.6
35326 52	Flotation machines, quantity in number of cells do..	308	11.4	(S)	(¹⁰)
35326 53	Dense medium vessels number..			(S)	109.8
35326 54	Jigs do..			(¹¹)	(¹¹)
35326 55	Tables, concentrating do..			11152	113.4
35326 56	Classifiers, sizing, washing, and dewatering, excluding cyclones do..	382	12.2	469	15.7
35326 57	Cyclones; wet, including heavy medium cyclones do..	1 066	6.3	1 929	5.8
35326 58	Centrifuges do..	106	6.3	250	11.6
35326 59	Centrifugal dryers do..				
35326 61	Scrubbers (all types including drums, log washers, attritioning machines, etc.) do..	99	2.3	99	3.1
35326 62	Dryers, thermal do..			145	7.4
35326 63	Spirals, concentrating do..	108	4.4	(S)	(¹²)
35326 64	Thickeners, excluding wet cyclones do..			(S)	(¹²)
35326 65	Filters do..			(S)	124.7

35327 19	Roll	87	6.5	220	11.1
	Grinding mills and pulverizers:				
35327 33	Ball				
35327 37	Rod				
35327 41	Other, including autogenous and semiautogenous, ring roll pulverizers, and airswept hammermills	50	19.9	284	55.1
	Screens, vibrating, stationary:				
35327 56	Horizontal	691	12.6	453	8.4
35327 57	Inclined	1 235	24.1	955	17.2
35327 58	Other, including trommell	187	3.6	802	9.4
35327 59	Other crushing, pulverizing, and screening machinery, not elsewhere classified	528	13.7	448	8.9
35328 —	Drills and other mining machinery, not elsewhere classified, excluding parts	11 066	131.3	15 095	133.5
	Drills and breakers:				
	Rock drills:				
	Air powered:				
35328 01	Track mounted or self-propelled			2 036	19.1
35328 02	Rubber tired mounted or self-propelled	4 847	19.9	(13)	(13)
35328 05	Handheld			(13)	(13)
	Hydraulic powered:				
35328 08	Track mounted or self-propelled			(13)	(13)
35328 09	Rubber tired mounted or self-propelled	14514	1459.7	134 995	1321.9
35328 10	Handheld				
	Coal drills:				
35328 06	Mounted, unmounted, or self-propelled			(15)	(15)
35328 07	Handheld	64	.9	(15)	(15)
35328 13	Core drills, mineral exploration	(14)	(14)	15668	1521.8
	Roof bolters:				
35328 52	Coal	413	21.9	390	36.3
35328 53	Other than coal				
35328 60	Impact breakers, mounted, including air and hydraulic			686	3.6
	All other mining machinery and equipment, excluding parts sold separately:				
35328 70	Rubber tired	6 422	28.9	757	2.6
35328 80	Other than rubber tired			5 563	28.2
3533A —	Portable drilling rigs	(X)	224.5	(X)	409.2
	Portable drilling rigs with pull-back capacity (water well, mineral exploration, shallow oil, and gas):				
3533A 11	Cable tool (all sizes)	(16)	(16)	(17)	(17)
3533A 13	Reverse circulation (18 inch or larger)	(16)	(16)	(17)	(17)
	Rotary, trailer and truck mounted with pull-back capacity:				
3533A 21	Less than 14,999 lb	99	5.3	112	2.8
3533A 23	15,000 to 29,999 lb	87	16.0	87	17.8
3533A 25	30,000 to 59,999 lb	90	23.7	192	44.0
3533A 27	60,000 to 74,999 lb			69	21.0
3533A 29	75,000 lb or more	45	16.9	234	104.4
	Blasthole drills, rotary:				
	Truck mounted:				
3533A 31	Less than 29,999 lb				
3533A 33	30,000 to 59,999 lb	(16)	(16)		
3533A 35	60,000 lb or more	(16)	(16)	60	23.3
	Track mounted:				
3533A 37	Up to 29,999 lb	37	10.7	120	13.9
3533A 38	30,000 to 59,999 lb	82	26.0	99	25.1
3533A 39	60,000 lb or more	25	13.2	75	61.4
	Construction drills:				
3533A 41	Bucket drills				
3533A 43	Auger drills	517	20.2	209	13.6
3533A 49	Other portable drilling rigs, including workover (service) rigs	161 504	1621.7	174 895	1781.9
	Related mining machinery and equipment:				
35355 64	Armored flexible conveyors for long wall mining	(D)	(D)	(NA)	(NA)
35363 15	Mine shaft and slope wire rope hoists; drum or friction, electric or hydraulic, excluding tuggers, sheaves, skips, cages, and buckets	(D)	(D)	.3	7.9
3533A 78	Parts for portable drilling rigs	(X)	70.9	(X)	(X)

¹For 1987, data for product code 3531M 03 are not included in total for product class 3531E —.

²For 1987, data for product codes 3531E 13 and 3531E 14 are combined to avoid disclosing data for individual companies.

³For 1982, data for product codes 3531E 24 and 3531E 25 were combined to avoid disclosing data for individual companies.

⁴For 1982, data for product codes 3531E 33, 3531E 34, and 3531E 35 were combined to avoid disclosing data for individual companies.

⁵For 1982, data for product code 3531E 96 were not collected separately, but included with product code 3531E 98.

⁶For 1982, data for product codes 3531F 60 and 3531F 62 were combined to avoid disclosing data for individual companies.

Table 6a-2. Related Products From Current Industrial Reports Series—Value of Shipments by All Producers: 1987 and 1982—Con.

⁷For 1982, data for product codes 3531F 68, 3531F 70, 3531F 72, 3531F 74, 3531F 76, and 3531F 78 were combined to avoid disclosing data for individual companies.

⁸For 1987, data for product codes 3531G 25 and 3531G 27 are combined to avoid disclosing data for individual companies.

⁹For 1982, data for product codes 35325 33 and 35325 35 were combined to avoid disclosing data for individual companies.

¹⁰For 1982, data for product codes 35326 52 and 35326 53 were combined to avoid disclosing data for individual companies.

¹¹For 1982, data for product codes 35326 54 and 35326 55 were combined to avoid disclosing data for individual companies.

¹²For 1982, data for product codes 35326 63, 35316 64, and 35326 65 were combined to avoid disclosing data for individual companies.

¹³For 1982, data for product codes 35328 02, 35328 05, 35328 08, and 35328 09 were combined to avoid disclosing data for individual companies.

¹⁴For 1987, data for product code 35328 13 are combined with product codes 35328 08, 35328 09, and 35328 10 to avoid disclosing data for individual companies.

¹⁵For 1982, data for product codes 35328 06, 35328 07, and 35328 13 were combined to avoid disclosing data for individual companies.

¹⁶For 1987, data for product codes 3533A 11, 3533A 13, 3533A 33, and 3533A 35 are combined with product code 3533A 49 to avoid disclosing data for individual companies.

¹⁷For 1982, data for product codes 3533A 11 and 3533A 13 are combined with product code 3533A 49 to avoid disclosing data for individual companies.

Table 6b. Product Classes—Value of Shipments by All Producers for Specified States: 1987 and 1982

[Million dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than \$2 million in product class shipments or they disclose data for individual companies in 1987. For meaning of abbreviations and symbols, see introductory text. For comparability of product classes and product codes between 1982 and 1987 and explanation of terms, see appendixes]

Product class and geographic area	1987 value of product shipments	1982 value of product shipments	Product class and geographic area	1987 value of product shipments	1982 value of product shipments

¹Figures are estimates derived from a representative sample of manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures publications for this period.

²Data for product class 3531E included parts sold separately.

³For 1982, data for attachments (sold separately) for tractors in product classes 3531A, 3531B, and 3531C were included in product class 3531M.

⁴For 1976 and prior years, data for portable water well and blast hole drilling rigs were contained in either product class 3531K or 3533A. Since 1977, data for these rigs are contained in product class 3533A only.

⁵Data included construction machinery, n.e.c., n.s.k., and attachments (sold separately) for tractors in product classes 3531A, 3531B, and 3531C.

⁶Since 1982, parts for portable drilling rigs are included with product class 3533A. For 1981 and prior years, parts for portable drilling rigs were included with product class 35339.

⁷For 1976 and prior years, data for product classes 35353 and 35355 were combined.

⁸For 1976 and prior years, data for product classes 35354 and 35356 were combined.

⁹Data included automobile hoists (used on tow trucks).

Table 7. Materials Consumed by Kind: 1987 and 1982

[Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see Cost of Materials in appendixes. For meaning of abbreviations and symbols, see introductory text]

1987 material code	Material	1987		1982	
		Quantity ¹	Delivered cost (million dollars)	Quantity ¹	Delivered cost (million dollars)
	INDUSTRY 3531, CONSTRUCTION MACHINERY				
	Materials, parts, containers, and supplies -----	(X)	6 101.7	(X)	5 507.9
	Mill shapes and forms, except castings and forgings:				
	Carbon steel:				
331011	Bars and bar shapes ----- 1,000 s tons..	(S)	152.4	(S)	157.7
331012	Sheet and strip ----- do..	(S)	141.9	^{**} 154.9	78.5
331013	Plates ----- do..	(S)	250.8	(S)	303.4

¹For some establishments, data have been estimated from central unit values which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * 10 to 19 percent estimated; ** 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

²Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

³Data are included with material code 970099 to avoid disclosing data for individual companies.

⁴For 1982, total included data for pig iron, excluding silvery iron.

⁵For 1982, data for material codes 335102, 335143, and 335152 were combined with material code 335792 to avoid disclosing data for individual companies.

⁶For 1982, total included data for metal powders.

⁷For 1987, data for material code 335301 are included with material code 335008 to avoid disclosing data for individual companies.

⁸For 1982, total included data for copper and copper-base alloy castings (rough and semifinished). For 1982, data for copper castings were excluded from material code 336003.

⁹For 1987, data for material code 335143 are combined with material code 335152 to avoid disclosing data for individual companies.

¹⁰Industry definition is new for 1987; therefore, 1987 data for materials consumed are not comparable to prior-year data. As a result, 1982 materials consumed data are not available.

APPENDIX A.

Explanation of Terms

This appendix is in two sections. Section 1 includes items requested of all establishments mailed census of manufactures forms including annual survey of manufactures (ASM) forms. Note that this section also includes several items (number of establishments and companies, value added, classes of products, and specialization and coverage ratios) not included on the report forms but derived from information collected on the forms. Section 2 covers supplementary items requested only from establishments included in the ASM sample. Results of the supplementary ASM inquiries are included in table 3c of this report.

SECTION 1. ITEMS COLLECTED OR DERIVED BASED ON ALL CENSUS OF MANUFACTURES (INCLUDING ASM) REPORT FORMS

Number of establishments and companies—As discussed in the Introduction, a separate report was required for each manufacturing establishment (plant) with one employee or more. An establishment is defined as a single physical location where manufacturing is performed. A company, on the other hand, is defined as a business organization consisting of one establishment or more under common ownership or control.

If the company operated at different physical locations, even if the individual locations were producing the same line of goods, a separate report was requested for each location. If the company operated in two or more distinct lines of manufacturing at the same location, a separate report was requested for each activity.

An establishment not in operation for any portion of the year was requested to return the report form with the proper notation in the "Operational Status" section of the form. In addition, the establishment was requested to report data on any employees, capital expenditures, inventories, or shipments from inventories during the year.

In this report, data are shown for establishments in operation at any time during the year. A comparison with the number of establishments in operation at the end of the year will be provided in the Introduction of the General Summary subject report.

Employment and related items—The report forms requested separate information on production workers for a specific payroll period within each quarter of the year and on other employees as of the payroll period which included the 12th of March.

All employees—This item includes all full-time and part-time employees on the payrolls of operating manufacturing establishments during any part of the pay period which included the 12th of the months specified on the report form. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods.

Officers of corporations are included as employees; proprietors and partners of unincorporated firms are excluded. The "all employees" number is the average number of production workers plus the number of other employees in mid-March. The number of production workers is the average for the payroll periods including the 12th of March, May, August, and November.

Production workers—This item includes workers (up through the line-supervisor level) engaged in fabricating, processing, assembling, inspecting, receiving, storing, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial and guard services, product development, auxiliary production for plant's own use (e.g., power plant), recordkeeping, and other services closely associated with these production operations at the establishment covered by the report. Employees above the working-supervisor level are excluded from this item.

All other employees—This item covers nonproduction employees of the manufacturing establishment including those engaged in factory supervision above the line-supervisor level. It includes sales (including driver salespersons), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office function, executive, purchasing, financing, legal, personnel (including cafeteria, medical, etc.), professional, and technical employees. Also included are employees on the payroll of the manufacturing establishment engaged in the construction of major additions or alterations to the plant and utilized as a separate work force.

In addition to reports sent to operating manufacturing establishments, information on employment during the payroll period which included March 12 and annual payrolls also was requested of auxiliary units (e.g., administrative offices, warehouses, and research and development laboratories) of multiestablishment companies. However, these figures are not included in the totals for individual

industries shown in this report. They are included in the general summary and geographic area reports as a separate category.

Payroll—This item includes the gross earnings of all employees on the payroll of operating manufacturing establishments paid in the calendar year 1987. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. It includes all forms of compensation, such as salaries, wages, commissions, dismissal pay, bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of corporations; it excludes payments to proprietors or partners of unincorporated concerns. Also excluded are payments to members of Armed Forces and pensioners carried on the active payroll of manufacturing establishments.

The census definition of payrolls is identical to that recommended to all Federal statistical agencies by the Office of Management and Budget. It should be noted that this definition does not include employers' Social Security contributions or other nonpayroll labor costs, such as employees' pension plans, group insurance premiums, and workers' compensation.

The ASM provides estimates of employers' supplemental labor costs, both those required by Federal and State laws and those incurred voluntarily or as part of collective bargaining agreements. (Supplemental labor costs are explained later in this appendix.)

As in the case of employment figures, the payrolls of separate auxiliary units of multiestablishment companies are not included in the totals for individual industries or industry groups.

Production-worker hours—This item covers hours worked or paid for at the plant, including actual overtime hours (not straight-time equivalent hours). It excludes hours paid for vacations, holidays, or sick leave.

Cost of materials—This term refers to direct charges actually paid or payable for items consumed or put into production during the year, including freight charges and other direct charges incurred by the establishment in acquiring these materials. It includes the cost of materials or fuel consumed, whether purchased by the individual establishment from other companies, transferred to it from other establishments of the same company, or withdrawn from inventory during the year.

The important components of this cost item are (1) all raw materials, semifinished goods, parts, containers, scrap, and supplies put into production or used as operating supplies and for repair and maintenance during the year, (2) electric energy purchased, (3) fuels consumed for heat, power, or the generation of electricity, (4) work done by

others on materials or parts furnished by manufacturing establishments (contract work), and (5) products bought and resold in the same condition. (See discussion of duplication of data below.)

Specific materials consumed—In addition to the total cost of materials, which every establishment was required to report, information also was collected for most manufacturing industries on the consumption of major materials used in manufacturing. The inquiries were restricted to those materials which were important parts of the cost of production in a particular industry and for which cost information was available from manufacturers' records. Information on the establishments consuming less than a specified amount (usually \$10,000) of a specific material were not requested to report consumption of that material separately. Also, the cost of materials for the small establishments for which either administrative records or short forms were used was imputed as "not specified by kind." (See the introduction for the importance of administrative records in the industry.)

Value of shipments—This item covers the received or receivable net selling values, f.o.b. plant (exclusive of freight and taxes), of all products shipped, both primary and secondary, as well as all miscellaneous receipts, such as receipts for contract work performed for others, installation and repair, sales of scrap, and sales of products bought and resold without further processing. Included are all items made by or for the establishments from materials owned by it, whether sold, transferred to other plants of the same company, or shipped on consignment. The net selling value of products made in one plant on a contract basis from materials owned by another was reported by the plant providing the materials.

In the case of multiunit companies, the manufacturer was requested to report the value of products transferred to other establishments of the same company at full economic or commercial value, including not only the direct cost of production but also a reasonable proportion of "all other costs" (including company overhead) and profit. (See discussion of duplication of data below.)

Individual products—As in previous censuses, data were collected for most industries on the quantity and value of individual products shipped. In the 1987 census program, information was collected on the output of approximately 11,000 individual product items. The term "product", as used in the census of manufactures, represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term "product" as used in the marketing sense. In some cases, it may be much more detailed and, in other cases, it is more aggregative. For example, "pharmaceutical preparations" was distributed into over 100 terms; whereas, "motor gasoline" was reported as a single item.

Approximately 6,600 of the product items were listed separately on the 1987 census report forms. Data for

about 4,400 products were obtained in the monthly, quarterly, or annual surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1987 for these items, as derived from the commodity surveys, are shown in the "products shipped" table (table 6a-2).

The list of products for which separate information was collected was prepared after consultation with industry and government representatives. Comparability with previous figures was given considerable weight in the selection of product categories so that comparable 1982 information is presented for most products.

Typically, both quantity and value of shipments information were collected. However, if quantity was not significant or could not be reported by manufacturers, only value of shipments was collected.

Shipments include both commercial shipments and transfers of products to other plants of the same company. For industries in which a considerable portion of the total shipments is transferred to other plants of the same company, separate information on interplant transfers also was collected. Moreover, for products that are used to a large degree within the same establishment as materials or components in the fabrication of other products, total production and often consumption of the item within the plant was collected. Typically, the information on production also was collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Other measures of output of products with long production cycles were used as appropriate and feasible.

Classes of products—To summarize the product information, the separate products were aggregated into classes of products that, in turn, were grouped into all primary products of each industry. The code structure used is a seven-digit number for the individual product, a five-digit number for the class of product, and a four-digit number for the total primary products in an industry. (See Introduction, Industry Classification of Establishments, for application of the coding structure to the assignment of SIC codes for establishments.)

In the 1987 census, the 11,000 products were grouped into approximately 1,500 separate classes on the basis of general similarity of manufacturing processes, types of materials used, and the like. However, the grouping of products was affected by the economic significance of the class and, in some cases, dissimilar products were grouped because the products were not sufficiently significant to warrant separate classes.

Duplication in cost of materials and value of shipments—The aggregate of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries includes large amounts of duplication since the products of some industries are used as materials by others. This duplication results, in part, from the

addition of related industries representing successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the food group and the addition of pulp mills to paper mills in the paper and allied products group of industries. Estimates of the overall extent of this duplication indicate that the value of manufactured products exclusive of such duplication (the value of finished manufactures) tends to approximate two-thirds of the total value of products reported in the annual survey.

Duplication of products within individual industries is significant within a number of industry groups, e.g., machinery and transportation industries. These industries frequently include complete machinery and their parts. In this case, the parts made for original equipment are materials consumed for assembly plants in the same industry.

Even when no significant amount of duplication is involved, value of shipments figures are deficient as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs of value of shipments, both among industries and within the same industry.

Before 1962, cost of materials and value of shipments were not published for some industries which included considerable duplication. Since then, these data have been published for all industries at the United States level and beginning in 1964, for all geographic levels.

Value added by manufacture—This measure of manufacturing activity is derived by subtracting the cost of materials, supplies, containers, fuel, purchased electricity, and contract work from the value of shipments (products manufactured plus receipts for services rendered). The result of this calculation is adjusted by the addition of value added by merchandising operations (i.e., the difference between the sales value and the cost of merchandise sold without further manufacture, processing, or assembly) plus the net change in finished goods and work-in-process between the beginning- and end-of-year inventories.

For those industries where value of production is collected instead of value of shipments (see footnote in table 1a), value added is adjusted only for the change in work-in-process inventories between the beginning and end of year. For those industries where value of work done is collected, the value added does not include an adjustment for the change in finished goods or work-in-process inventories.

"Value added" avoids the duplication in the figure for value of shipments that results from the use of products of some establishments as materials by others. Value added is considered to be the best value measure available for comparing the relative economic importance of manufacturing among industries and geographic areas.

New and used capital expenditures—For establishments in operation and any known plants under construction, manufacturers were asked to report their new expenditures for (1) permanent additions and major alterations to

manufacturing establishments, and (2) machinery and equipment used for replacement and additions to plant capacity if they were of the type for which depreciation accounts were ordinarily maintained.

The totals for new expenditures include expenditures leased from nonmanufacturing concerns through capital leases, new facilities owned by the Federal Government but operated under contract by private companies, and plant and equipment furnished to the manufacturer by communities and nonprofit organizations. Also excluded are expenditures for used plant and equipment (although reported in the census), expenditures for land, and cost of maintenance and repairs charged as current operating expenses.

Manufacturers also were requested to report the value of all used buildings and equipment purchased during the year at the purchase price. For any equipment or structure transferred for the use of the reporting establishment by the parent company or one of its subsidiaries, the value at which it was transferred to the establishment was to be reported. Furthermore, if the establishment changed ownership during the year, the cost of the fixed assets (building and equipment) was to be reported under used capital expenditures.

Total expenditures for used plant and equipment is a universe figure; it is collected on all census forms. However, the breakdown of this figure between expenditures for used buildings and other structures and expenditures for used machinery and equipment is collected only on the ASM form. The data for total new capital expenditures, new building expenditures, and new machinery expenditures, as well as the data for total used expenditures, are shown in table 3b.

End-of-year inventories—Respondents were asked to report their 1986 and 1987 end-of-year inventories at cost or market. Effective with the 1982 Economic Censuses, this change to a uniform instruction for reporting inventories was introduced for all sector reports. Prior to 1982, respondents were permitted to value inventories using any generally accepted accounting method (FIFO, LIFO, market, to name a few). In 1982, LIFO users were asked to first report inventory values prior to the LIFO adjustment and then to report the LIFO reserve and the LIFO value after adjustment for the reserve.

SECTION 2. ITEMS COLLECTED ONLY ON ASM REPORT FORMS

The following items were collected only from establishments included in the ASM sample:

1. **Supplemental labor costs**—Supplemental labor costs are divided into legally required expenditures and payments for voluntary programs. The legally required portion consists primarily of Federal old age and survivors' insurance, unemployment compensation, and workers' compensation. Payments for voluntary programs include all programs not

Because of this change in reporting instructions, the 1982 through 1987 data for inventories and value added by manufacture included in the tables of this report are not comparable to the prior-year data shown in table 1a of this report and in historical census of manufactures and annual survey of manufactures publications.

In using inventory data by stage of fabrication for "all industries" and at the two-digit industry level, it should be noted that an item treated as a finished product by an establishment in one industry may be reported as a raw material by another establishment in a different industry. For example, the finished-product inventories of a steel mill would be reported as raw materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication shown for individual industries, industry groups, and "all manufacturing", which are aggregates of figures reported by establishments in specified industries.

Specialization and coverage ratios—These items are not collected on the report forms but are derived from the data shown in table 5b. An establishment is classified in a particular industry if its shipments of primary products of that industry exceed in value its shipments of the products of any other single industry.

As noted in the introduction, an establishment's shipments include those products assigned to an industry (primary products), those considered primary to other industries (secondary products), and receipts for miscellaneous activities (merchandising, contract work, resales, etc.). Specialization and coverage ratios have been developed to measure the relationship of primary product shipments to the data on shipments for the industry shown in tables 1a through 5a and data on product shipments shown in tables 6a through 6c.

Specialization ratio represents the ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for the establishments classified in the industry.

Coverage ratio represents the ratio of primary products shipped by the establishments classified in the industry to the total shipments of such products that are shipped by all manufacturing establishments wherever classified.

specifically required by legislation whether they were employer initiated or the result of collective bargaining. They include the employer portion of such plans as insurance premiums, premiums for supplemental accident and sickness insurance, pension plans, supplemental unemployment compensation, welfare plans, stock purchase plans on which the employer payment is not subject to withholding tax, and deferred profit-sharing plans.

They exclude such items as company-operated cafeterias, in-plant medical services, free parking lots, discounts on employee purchases, and uniforms and work clothing for employees. While the excluded items do benefit employees and all or part of their cost generally is similar to the items covered in the ASM labor costs statistics, accounting records generally do not provide reliable figures on net employee benefits of these types.

2. **Retirements of depreciable assets**—Included in this item is the gross value of assets sold, retired, scrapped, destroyed, etc., during 1987. When a complete operation or establishment changed ownership, the respondent was instructed to report the value of the assets sold at the original cost as recorded in the books of the seller. The respondent also was requested to report retirements of equipment or structures owned by a parent company that the establishment was using as if it were a tenant.
3. **Depreciation charges for fixed assets**—This item includes depreciation and amortization charged during the year against assets. Depreciation charged against fixed assets acquired since the beginning of the year and against assets sold or retired during the year are components of this category. Respondents were requested to make certain that they did not report accumulated depreciation.
4. **Rental payments**—Total rental payments is collected on all census forms. However, the breakdown between rental payments for buildings and other structures and rental payments for machinery and equipment is collected only on the ASM forms. This item includes rental payments for the use of all items for which depreciation reserves would be maintained if they were owned by the establishment, e.g., structures and buildings, and production, office, and transportation equipment. Excluded are royalties and other payments for the use of intangibles and depletable assets, and land rents where separable.

When an establishment of a multiestablishment company was charged rent by another part of the same company for the use of assets owned by the company, it was instructed to exclude that cost from rental payments. However, the book value (original cost) of these company-owned assets was to be reported as assets of the establishment at the end of the year.

If there were assets at an establishment rented from another company and the rents were paid centrally by the head office of the establishment, the company was instructed to report these rental payments as if they were paid directly by the establishment.

5. **Depreciable assets**—Total value of gross depreciable assets is collected on all census forms.

However, the detail for depreciable assets is collected only on the ASM forms. The data encompass all fixed depreciable assets on the books of establishments at the beginning and end of the year. The values shown (book value) represent the actual cost of assets at the time they were acquired, including all costs incurred in making the assets usable (such as transportation and installation). Included are all buildings, structures, machinery, and equipment (production, office, and transportation equipment) for which depreciation reserves are maintained. Excluded are nondepreciable capital assets, including inventories and intangible assets, such as timber and mineral rights.

The definition of fixed depreciable assets is consistent with the definition of capital expenditures. For example, expenditures include actual capital outlays during the year, rather than the final value of equipment put in place and buildings completed during the year. Accordingly, the value of assets at the end of the year includes the value of construction in progress. In addition, respondents were requested to make certain that assets at the beginning of the year plus new and used capital expenditures, less retirements, equalled assets at the end of the year.

6. **New and used capital expenditures**—The data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used capital expenditures are collected on all census forms. However, the breakdown between expenditures for used buildings and other structures and expenditures for used machinery and equipment is collected only on the ASM form. (See further explanation on capital expenditures in section 1.)
7. **Quantity of electric energy consumed for heat and power**—Data on the cost of purchased electric energy were collected on all census forms. However, data on the quantity of purchased electric energy were collected only on the ASM forms. In addition, information was collected on the quantity of electric energy generated by the establishment and the quantity of electric energy sold or transferred to other plants of the same company.
8. **Breakdown of new capital expenditures for machinery and equipment**—ASM establishments were requested to separate their capital expenditures for new machinery and equipment into (1) automobiles, trucks, etc., for highway use, (2) computers and peripheral data processing equipment, and (3) all other.

The category "automobiles, trucks, etc., for highway use" is intended to measure expenditures for vehicles designed for highway use that were acquired through a purchase or lease-purchase agreement.

Vehicles normally operating off public highways (vehicles specifically designed to transport materials, property, or equipment on mining, construction, logging, and petroleum development projects) are excluded from this item.

9. **Foreign content of cost of materials**—Establishments included in the ASM sample panel were requested to provide information on foreign-made materials purchased or transferred from foreign sources. This includes materials acquired from a central warehouse or other domestic establishment of the same company but made in an operation outside of the 50 States, District of Columbia, Puerto Rico, or U.S. territories.

10. **Cost of purchased services**—ASM establishments were requested to provide information on the cost of purchased services for the repair of buildings and other structures, the repair of machinery, and communication services. Included in the cost of purchased services for the repair of buildings and machinery are payments made for all maintenance and repair work on buildings and equipment, such as painting, roof repairs, replacing parts, and overhauling equipment. Such payments made to other establishments of the same company and for repair and maintenance of any leased property also are included. Extensive repairs or reconstruction that were capitalized are considered capital expenditures for used buildings and machinery and are, therefore, excluded from this item. Repair and maintenance costs provided by an owner as part of a rental contract or incurred directly by an establishment in using its own work force also are excluded.

Three basic approaches were utilized to produce these statistics.

1. For items 1 through 6, data were estimated (imputed) for all non-ASM establishments using the available data in the establishment record and industry-based parameters. The statistics were then generated by simply tabulating all census records including the imputed value for non-ASM establishments and the unweighted value for ASM establishments. Separate imputation rates were developed and are shown in the table. For quantity of purchased electricity for heat and power (item 7), a similar procedure was used; however, the imputation parameters were geographically-based instead of industry-based. For quantities of generated less sold electricity, no imputation was performed for non-ASM establishments. The estimates for these items are simply tabulations of unweighted ASM values.

Since the published statistics for these items were developed from the complete census universe and not just the ASM establishments, there are no sampling variances associated with these statistics. However, there is an unknown level of bias for each of the items due to the imputation of the non-ASM establishments. This bias is felt to be small due to the strong correlation between the items being imputed and the collected items that were used to generate the impute values.

2. For items 8 and 9, the estimates were developed using a ratio estimation methodology. For item 8, an estimate of the breakout of new capital expenditures for machinery and equipment into the three categories was made from ASM establishments reporting these categories. The estimated proportions were then applied to the corresponding Census value for new capital expenditures for machinery and equipment to produce the estimates.

The estimates for item 9, foreign content of cost of materials, were developed in a similar manner based on costs of parts, supplies, and components (item 5a) as the control total for the three categories.

For items 8 and 9, an adjustment ratio of the following form was computed.

$$R_j = \frac{NM_c}{TME_{asm}}$$

where:

NM_c = the census value of new capital expenditures for machinery and equipment

TME_{asm} = the weighted ASM value of new capital expenditures for machinery and equipment from reporters of the detailed breakout data

3. For item 10, cost of purchased services, the estimates were made by simply tabulating weighted data for all the ASM records that reported the item. A response coverage ratio (a measure of the extent to which respondents reported for each item) is shown in table 3c for the three types of services. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight, see appendix B) for those ASM establishments that reported the specific inquiry to the weighted total employment for all ASM establishments classified in the industry.

APPENDIX B.

Annual Survey of Manufactures (ASM) Sampling and Estimating Methodologies

DESCRIPTION OF SURVEY SAMPLE

The Annual Survey of Manufactures (ASM) contains two components. The mail portion of the survey is a probability sample of about 56,000 manufacturing establishments selected from a total of about 220,000 establishments. These 220,000 establishments represent all manufacturing establishments of multiunit companies and all single establishment companies mailed schedules in the 1982 Census of Manufactures. This mail portion is supplemented annually by a Social Security Administration list of new manufacturing establishments opened after 1982 and a list of new multiunit manufacturing establishments identified from the Census Bureau's Company Organization Survey.

The 1984 through 1988 ASM sample differs slightly from the previous sample. For the current panel, all establishments of companies with 1982 shipments in manufacturing in excess of \$500 million were included in the survey panel with certainty. There are approximately 500 such companies collectively accounting for approximately 18,000 establishments. For the remaining portion of the mail survey, the establishment was defined as the sampling unit. For this portion, all establishments with 250 employees or more and establishments with a very large value of shipments also were included in the survey panel with certainty. A total of 12,100 establishments were selected from this portion of the universe with certainty. Therefore, of the 56,000 manufacturing establishments included in the ASM panel, approximately 31,000 are selected with certainty. These certainty establishments collectively account for approximately 80 percent of the total value of shipments in the 1982 census.

Smaller establishments in the remaining portion of the mail survey were sampled with probabilities ranging from 0.999 to 0.005 in accordance with mathematical theory for optimum allocation of a sample. The probabilities of selection assigned to the smaller establishments were proportional to measures of size determined for each establishment. The measures of size depend directly upon each establishment's 1982 product class values and the historic variability of the year-to-year shipments of each product class. Product classes displaying more volatile year-to-year change in shipments at the establishment level were sampled at a heavier rate.

This method of assigning measures of size was used in order to maximize the precision (that is, minimize the variance of estimates of the year-to-year change) in the value of product class shipments. Implicitly, it also gave weight differences in employment, value added, and other

general statistics, since these are highly correlated with value of shipments. Individual sample selection probabilities were obtained by multiplying each establishment's final measure of size by an overall sampling fraction coefficient calculated to yield a total expected sample size.

The sample selection procedure gave each establishment in the sampling frame an independent chance of selection. This method of independent selection permits the rotation of small establishments out of a given sample panel without introducing a bias into the survey estimates.

The nonmail portion of the survey includes all single-establishment companies that were tabulated as administrative records in the 1982 Census of Manufactures. Although this portion contained approximately 130,000 establishments, it accounted for less than 2 percent of the estimate for total value of shipments at the total manufacturing level. This portion was not sampled; rather, the data for every establishment in this group were estimated based on selected information obtained annually from the administrative records of the Internal Revenue Service and the Social Security Administration. This administrative-record information, which includes payroll, total employment, industry classification, and physical location of the establishment, was obtained under conditions which safeguard the confidentiality of both tax and census records. Estimates of data other than payroll and employment for these small establishments were developed from industry averages.

The corresponding estimates for the mail and nonmail establishments were added together, along with the base-year differences, as defined in the Description of Estimating Procedure section, to produce the figures shown in this publication.

DESCRIPTION OF ESTIMATING PROCEDURES

Most of the ASM estimates for the years 1983-1986 were computed using a difference estimation procedure. For each item, a base-year difference was developed. This base-year difference is equal to the difference between the 1982 census published number for an item total and the linear ASM estimate of the total for 1982. The ASM linear estimate was obtained by multiplying each sample establishment's data by its sample weight (the reciprocal of its probability of selection) and summing the weighted values.

These base-year differences were then added to the corresponding current-year linear estimates, which include the sum of the estimates for the mail and nonmail establishments, to produce the estimates for the years 1983-1986. Estimates developed by this procedure usually are far more reliable than comparable linear estimates developed from the current sample data alone.

The 1987 sample estimates for the purchased service items, shown in table 3c, are strictly ASM linear estimates, however, developed only from ASM establishments that reported the specific item.

The remaining estimates in table 3c, showing the breakdown of expenditures for new machinery and equipment and costs of parts (separated into purchases from foreign sources and purchases from domestic sources), were computed as ratio estimates. To do this, linear estimates of the new machinery detail items were developed from the ASM establishments and were ratio adjusted to the corresponding census total for new machinery. In a similar fashion, the ASM linear estimates of the detailed purchased materials items were ratio adjusted to the corresponding census total for cost of parts.

QUALIFICATIONS OF THE DATA

The estimates developed from the sample are apt to differ somewhat from the results of a survey covering all companies in the sampled lists but otherwise conducted under essentially the same conditions as the actual sample survey. The estimates of the magnitude of the sampling errors (the differences between the estimates obtained and the results theoretically obtained from a comparable, complete-coverage survey) are provided by the standard errors of the estimates.

The particular sample selected for the ASM is one of a large number of similar probability samples that, by chance, might have been selected under the same specifications. Each of the possible samples would yield somewhat different sets of results, and the standard errors are measures of the variation of all the possible sample estimates around the theoretical, comparable, complete-coverage values.

Estimates of the standard errors have been computed from the sample data for selected statistics in this report. They are presented in the form of relative standard errors (the standard errors divided by the estimated values to which they refer).

In conjunction with its associated estimate, the relative standard error may be used to define confidence intervals (ranges that would include the comparable, complete-coverage value for specified percentages of all the possible samples).

The complete coverage value would be included in the range:

1. From one standard error below to one standard error above the derived estimate for about two-thirds of all possible samples.
2. From two standard errors below to two standard errors above the derived estimate for about 19 of 20 of all possible samples.
3. From three standard errors below to three standard errors above the derived estimate for nearly all samples.

An inference that the comparable, complete-survey result would be within the indicated ranges would be correct in approximately the relative frequencies shown. Those proportions, therefore, may be interpreted as defining the confidence that the estimates from a particular sample would differ from complete-coverage results by as much as one, two, or three standard errors, respectively.

For example, suppose an estimated total is shown as 50,000 with an associated relative standard error of 2 percent, that is, a standard error of 1,000 (2 percent of 50,000). There is approximately 67 percent confidence that the interval 49,000 to 51,000 includes the complete-coverage total, about 95 percent confidence that the interval 48,000 to 52,000 includes the complete-coverage total and almost certain confidence that the interval 47,000 to 53,000 includes the complete coverage total.

In addition to the sample errors, the estimates are subject to various response and operational errors: errors of collection, reporting, coding, transcription, imputation for nonresponse, etc. These operational errors also would occur if a complete canvass were to be conducted under the same conditions as the survey. Explicit measures of their effects generally are not available. However, it is believed that most of the important operational errors were detected and corrected in the course of the Bureau's review of the data for reasonableness and consistency. The small operational errors usually remain. To some extent, they are compensating in the aggregated totals shown. When important operational errors were detected too late to correct the estimates, the data were suppressed or were specifically qualified in the tables.

As derived, the estimated standard errors included part of the effect of the operational errors. The total errors, which depend upon the joint effect of the sampling and operational errors, are usually of the order of size indicated by the standard error, or only moderately higher. However, for particular estimates, the total error may considerably exceed the standard errors shown.

The concept of complete coverage under the conditions prevailing for the ASM is not identical to the complete coverage of the census of manufactures, as the censuses have been conducted. Nearly all types of operational errors that affect the ASM also occur in the censuses. The ASM and the censuses, are conducted under quite different conditions, and operational errors can be better controlled in the ASM than in the censuses. As a result, for many of the census figures, the errors are of the same order of size as the total errors of the corresponding annual survey estimates. The differences between the census and ASM operating conditions also disturb, to some degree, the comparability of the ASM and census data.

Any figures shown in the tables in this publication having an associated standard error exceeding 15 percent may be of limited reliability. However, the figure may be combined with higher-level totals, creating a broader aggregate, which then may be of acceptable reliability.

APPENDIX C.

Changes in Census of Manufactures

Product Classes for 1987

[Based on revisions to the Standard Industrial Classification (SIC) Manual, definitions of some product classes were revised for 1987. Listed below are the revisions to the product classes]

Changes in Census of Manufactures

Product Codes for 1987

[Based on revisions to the Standard Industrial Classification (SIC) Manual, definitions of some product codes were revised for 1987. Listed below are the revisions to the product codes. The terms published and collected are defined as follows: (1) published refers to the code used in the published reports for 1987 and 1982, and (2) collected refers to the code appearing on the report forms for 1987]

1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published

[Based on revisions to the Standard Industrial Classification (SIC) Manual, definitions of some product codes were revised for 1987. Listed below are the revisions to the product codes. The terms published and collected are defined as follows: (1) published refers to the code used in the published reports for 1987 and 1982, and (2) collected refers to the code appearing on the report forms for 1987]

1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published

[Based on revisions to the Standard Industrial Classification (SIC) Manual, definitions of some product codes were revised for 1987. Listed below are the revisions to the product codes. The terms published and collected are defined as follows: (1) published refers to the code used in the published reports for 1987 and 1982, and (2) collected refers to the code appearing on the report forms for 1987]

1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published

[Based on revisions to the Standard Industrial Classification (SIC) Manual, definitions of some product codes were revised for 1987. Listed below are the revisions to the product codes. The terms published and collected are defined as follows: (1) published refers to the code used in the published reports for 1987 and 1982, and (2) collected refers to the code appearing on the report forms for 1987]

1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published

[Based on revisions to the Standard Industrial Classification (SIC) Manual, definitions of some product codes were revised for 1987. Listed below are the revisions to the product codes. The terms published and collected are defined as follows: (1) published refers to the code used in the published reports for 1987 and 1982, and (2) collected refers to the code appearing on the report forms for 1987]

1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published	1987 published	1987 collected	1982 published

PUBLICATION PROGRAM

1987 CENSUS OF MANUFACTURES

Publications of the 1987 Census of Manufactures, containing preliminary and final data on manufacturing establishments in the United States, are described below. Publications order forms for the specific reports may be obtained from any Department of Commerce district office or from Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, DC 20233.

Preliminary Reports

Industry series—83 reports (MC87-I-20A(P) to -39D(P))

Preliminary industry data are issued in 83 separate reports covering 459 industries. Preliminary summary data for the U.S. and States are released in one report.

Final Reports

Industry series—83 reports (MC87-1-20A to -39D)

Each of the 83 reports provides information for a group of related industries ("dairy products" includes industries for butter, cheese, milk, etc.). Final figures for the United States are shown for each of the 459 manufacturing industries on quantity and value of products shipped and materials consumed, cost of fuels and electric energy, capital expenditures, assets, rents, inventories, employment, payroll, payroll supplements, hours worked, value added by manufacture, number of establishments, and number of companies. Comparative statistics for earlier years are provided where available.

For each industry, data on value of shipments, value added by manufacture, capital expenditures, employment, and payroll are shown by employment-size class of establishment, State, and degree of primary product specialization.

Geographic area series—51 reports (MC87-A-1 to -51)

A separate report is being published for each State and the District of Columbia. Each report presents data for industry groups and industries on value of shipments, cost of materials, value added by manufacture, employment, payroll, hours worked, new capital expenditures, and number of manufacturing establishments for the State, MSA's, counties, and selected places. Comparative statistics for earlier census years are shown for the State and large MSA's. Manufacturing totals are presented for each county and for places with significant manufacturing activity. Detailed statistics (including inventories, assets, rents, and energy costs) are presented only in statewide totals.

Subject series—7 reports (MC87-S-1 to -7)

Each of the seven reports contains detailed statistics for an individual subject, such as concentration ratios in manufacturing, type of organization, water use in manufacturing, textile machinery in place, distribution of sales by class of customer, manufacturers' shipments to the Federal Government, and a general national-level summary.

Reference series—1 report (MC87-R-1)

The Numerical List of Manufactured and Mineral Products includes a description of the principal products and services published in the 1987 Censuses of Manufactures and Mineral Industries.

Location of Manufacturing Plants—1 report (MC87-LM)

This report includes data for number of establishments by four-digit SIC industry and by employment-size class for counties, incorporated places of 2,500 inhabitants or more, and zip codes for each State. (This report is available only on magnetic tape and CD-ROM.)

Analytical Reports—3 reports (AR87-1 to -3)

Exports From Manufacturing Establishments (AR87-1)

This report presents data on exports by two- and three-digit SIC industry groups for the United States and States. Information is presented on value of direct report shipments and estimates of the employment required to manufacture these products. Included are estimates of employment in manufacturing and nonmanufacturing establishments that supply parts, materials, and services for production of manufactured exports.

Selected Characteristics of Manufacturing Establishments That Export (AR87-2)

This report presents data on the number of manufacturing companies and establishments that export by major group, State, employment size, and ratios of exports to shipments.

Indexes of Production (AR87-3)

The indexes presented in this report are designed to measure the change in physical output of each manufacturing and mineral industry between 1982 and 1987.

MICROFICHE

Every final published report in the 1987 Census of Manufactures will be available on microfiche.

PUBLIC-USE COMPUTER TAPES AND COMPACT DISCS

Data from the final industry series, geographic area series, and the Location of Manufacturing Plants report will be available on public-use computer tapes and compact discs-read only memory (CD-ROM). These tapes will provide the same information found in the final reports. Computerized data products are available for users who wish to summarize, rearrange, or process large amounts of data. These products, with corresponding technical documentation, are sold by Data User Services Division, Customer Services (Tapes), Bureau of the Census, Washington, DC 20233.

OTHER ECONOMIC CENSUSES REPORTS

Data on retail trade, wholesale trade, service industries, construction industries, mineral industries, transportation, enterprise statistics, minority-owned businesses, and women-owned businesses also are available from the 1987 Economic Censuses. A separate series of reports covers the censuses of outlying areas—Puerto Rico, Virgin Islands of the United States, Guam, and the Northern Mariana Islands. Separate announcements describing these reports are available free of charge from Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, DC 20233.
